The tool store is not just tools - it keeps the whole site's consumables flowing. So far this shutdown, crews have made **197 consumable draws** (950 items issued) across **14 companies** and **90 people**, covering 39 different consumable lines. Every draw goes through the counter and the double scan - two scans, two looks, one standard - so every number here is a scanned fact. A draw counts as ONE transaction no matter the quantity taken, and consumables carry no charges on this report - quantities only.

Shelf assurance - stocked before crews notice

61 consumable lines are stocked on site right now, 0 of them under min/max management. 0 lines at or below minimum are flagged for restock - watched every day as part of the daily stocktake, so the shelf is ready before anyone has to ask. Nothing goes on the shelf unless it is ready for use. Life Saving Rules (SEQ-GL-009) apply - Rule 5, Tools and Equipment: nothing damaged or out of date is ever issued, consumables included. Every chemical line on this shelf is covered by the Coates SDS register - 11 substances, each with a current Safety Data Sheet and a QR link at the shelf (full detail in the Safety & High-Care Assurance pack).

Bought-in & charged on

Items purchased for the site and charged on - logged in the Coates charge register, separate from the store's own shelf stock above. These carry recorded charge amounts; the shelf itself stays quantities-only.

Honest limits: A draw counts as one transaction regardless of quantity taken. Figures come from the SiteIQ SALES_STOCK export as at the data-as-at stamp. No consumables price feed is loaded - quantities only, with one exception: the bought-in & charged-on section shows recorded charge amounts from the Coates charge register.

All returns go through the Coates tool store, handed to the stores team and double-scanned. Nothing is returned unless it is scanned.
