PAGE 1 OF 11

Safety-critical gear gets a different level of care, and this report is the evidence. The 30-unit gas monitor fleet is pooled through the store - every monitor bump tested and fully charged before it is issued, never a partial charge, never an out-of-date unit. 72 radio handsets are managed the same way (70 in the working pool, 2 held as spares), with batteries charge-checked on every return - flat means on charge before ready. Milwaukee tooling is tracked piece by piece for its high replacement value. Life Saving Rules (SEQ-GL-009) sit under all of it - Rule 5, Tools and Equipment: anything damaged or defective is tagged out, photographed and removed from service on the spot. Never left on the shelf. Never reissued.

Today's safety conversation

TODAY'S SAFETY CONVERSATION

TOPIC 5 OF 20

5. Report Plant Breakdowns Clearly

When plant breaks down, stop operating it safely and report the problem promptly. Provide the plant or asset number, description, exact location, operator or company, contact number, time of failure and a clear explanation of what occurred. Do not continue operating or attempt an unauthorised repair. Accurate information allows Coates to arrange the correct response without unnecessary delays.

The better the breakdown information, the faster and safer the response can be.

Supports Coates Life Saving Rules (SEQ-GL-009) · **Rule 5 - Tools and Equipment**

KEY • ELECTRICAL / RIGGING test & tag current · tag colour BLUE · stays BLUE through August • LOGBOOK daily pre-start & logbook entry • RETURN DAILY back to the tool store every shift

Compliance on hire — what has to be checked

COMPLIANCE ON HIRE RIGHT NOW

76 ELECTRICAL · BLUE TAG	188 RIGGING · BLUE TAG	51 PRE-START & LOGBOOK	122 BACK DAILY	437 LINES WITH A CHECK
-----------------------------	---------------------------	---------------------------	-------------------	---------------------------

Every line below carries its own requirement. Anything showing a tag colour must be checked before use; anything showing a logbook or return line must be actioned that shift.

Every hire line on every report in this pack now carries its own requirement underneath the item name. That removes the ‘nobody told me’ conversation at the counter, and it gives the Coates team the detail they need to check gear over before it goes back out. Blank means the master file has nothing to declare for that item — never a guess.

Eyes on the fleet. 3013 of 4135 counted items physically sighted inside the window by 4 counters - daily stocktakes, no exceptions, and the count doubles as on-hire verification.

Diphoterine emergency rinse - chemical splash response

New capability at the store. 32 single-use emergency chemical-splash rinse units are held for issue to Cement Australia crews - sterile, sealed, date-controlled first-aid gear for corrosive splash, checked against the physical stock. These are not tools: the return check is unused, sealed and in date - anything else is an incident, not a return.

The process at the counter: sign one out at the store (sign-out sheet at the counter), carry it sealed, and hand it back the same way - **unused, sealed and in date**. **ANY USE = INCIDENT** - a used unit means a chemical splash has happened: first aid comes first, then notify the Cement Australia site supervisor and the Coates tool store immediately so the unit is replaced and the incident is recorded. **Not for hydrofluoric acid** or fluorides in acidic medium - Diphoterine has limited action there; confirm the chemical with the Cement Australia supervisor if in doubt. Full SOP, issue register and quick-scan board live at the store.

Hazardous substances — the SDS register

Every chemical on the shutdown store shelf is registered with a current Safety Data Sheet — **11 substances**, each verified to the manufacturer's official SDS with a QR link at the shelf (as at 23 Jul 2026). Nothing goes on the shelf without one. This is doing our part before anyone has to ask.

Log Books

PLANT & EQUIPMENT
SITE NOTICEUsing Coates plant? **Fill in the log book. Every machine, every shift.**

-  **Before you start** Find the log book on the machine and do your pre-start check. Write it in **before** you operate. No pre-start, no start.
-  **Every shift, every operator** A new line at the start of every shift, and every time the operator changes. Date, name, start and finish hours or kilometres.
-  **Faults and damage** Something not right? Write it in straight away, tag the machine out of service and tell Coates. Don't leave it for the next crew.
-  **Fuel, fluids and servicing** Record refuelling and any fluid top-ups. If a service is coming due, note the reading and let Coates know so we can book it in.
-  **Keep it with the machine** The log book lives in its holder on the machine — dry, legible and complete. Missing or full? Call Coates for a new one before the machine goes to work.
-  **Sign it** Print your name and sign. The log book is the record of the machine's condition and of your check — it protects you, your crew and whoever is on it next.

If it's not in the log book, it didn't happen.

Two minutes at the start of your shift. It keeps the machine safe and everyone on it safe.

This notice supports **Coates Life Saving Rule 5 — Tools and Equipment (SEQ-GL-009)**: "I will only use tools and equipment that are fit for purpose and for which I am trained, competent and authorised. I will ensure that damaged or defective equipment is tagged out and removed from service." The log book is how you show it. If you're not sure about a machine, stop, tag it out and call your Coates contact.

Coates · Equipped for anything | Issued 25 Jul 2026 | Author: Andrew Fisher, Shutdown Manager QLD & NT

Meet the tool store team

The crew running your K2 tool store - getting the right gear to the right crew, keeping it looked after and ready, and making sure everything that leaves the store is right. Day and night, so the shutdown keeps moving. Something not on hand or not right? Tell us and we'll sort it.
