KEY • **RETURN DAILY** back to the tool store every shift • **BUMP TEST** bump, charge and scan before issue • **OUT OF CALIBRATION** is out of service

AMBER

35 monitors have been out 30 days or more (\$70,000 of replacement exposure) and **81.5%** of the last 30 days' draws came back the same day - 77 units are overdue in all.

THE RULE

Units out 30 days or more: Green under 10, Amber from 10, Red from 40; Amber if same-day returns fall more than 10 points under the 85% target. Default lines - set in CONFIG.

OWNER

Andrew Fisher, Shutdown Manager - Coates tool store

NEXT ACTION AND BY WHEN

Appendix A (every overdue unit, oldest first) to each company's supervisor by **05 Sep 2026**; units recovered are reported on the next run.

Nine in ten completed monitor hires this year were back inside **46 hours** - counted from 64,958 completed hires in the transaction log, half of them back inside 10.4 hours and 78.6% the same day.

THE POSITION AT 15:27, 03 SEP 2026. 878 Dräger X-am 5000 monitors on the Ampol register: **221 on the shelf**, 276 out to crew (**77 overdue**), 316 in custody and 65 in the Dräger repair queue. Counted from the SiteIQ exports - nothing estimated.

Ampol Gas Monitor Operations

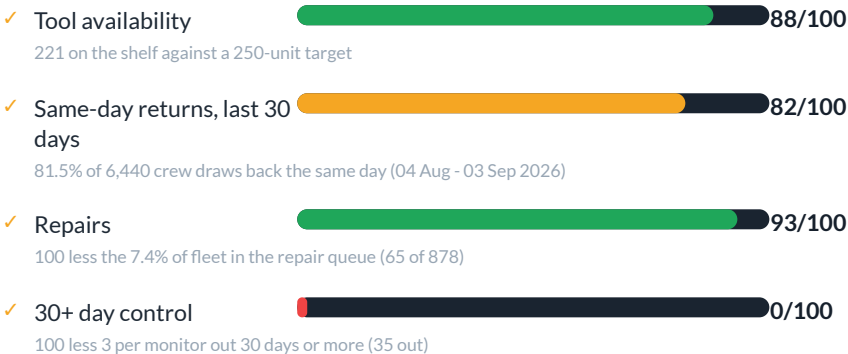

AS AT 03 SEP 2026 15:27

The position in detail

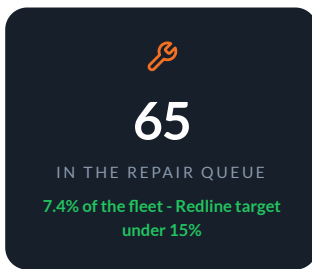

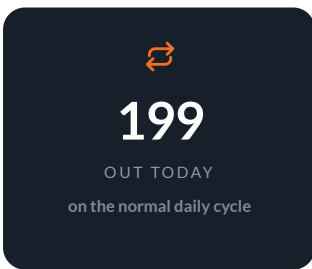

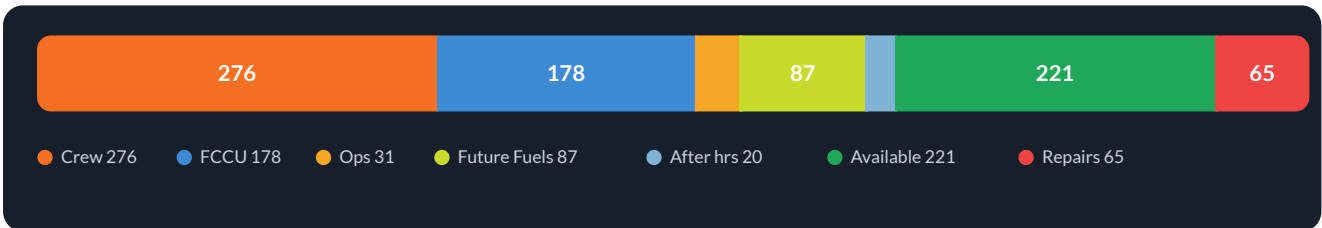

THE POSITION AT 15:27, 03 SEP 2026. 878 Dräger X-am 5000 monitors are on the Ampol register: 221 on the shelf, 276 out to crew (199 today, 77 overdue from earlier days), 316 in custody (FCCU, Operations, Future Fuels, after-hours) and 65 in the Dräger repair queue. Counted from the SiteIQ exports on the data page - nothing is estimated.

Health score = plain average of the four scores:
 $(88 + 82 + 93 + 0) \div 4 = 66$

The fleet at a glance - where every monitor is at 15:27

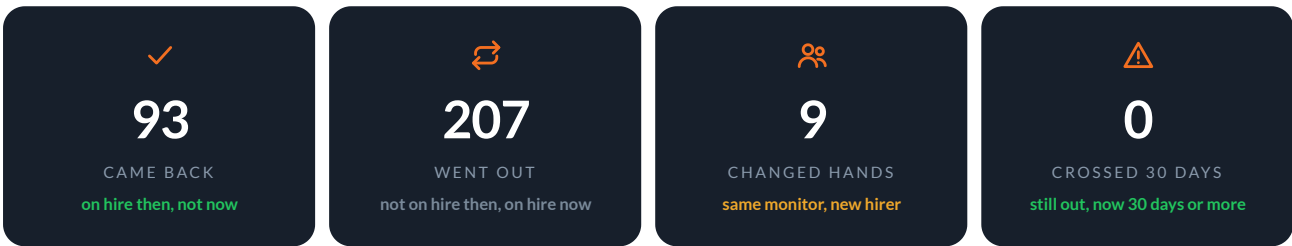

Health is green from 85, amber from 70, red below. Every score prints its own arithmetic; the four inputs are the shelf count against the 250-unit target, the 30-day same-day rate, the share of the fleet in the repair queue, and the units out 30 days or more. Custody holdings (FCCU 178, Operations 31, Future Fuels 87, after-hours 20) sit outside the crew count and are listed with their ages on the overdue page.

Ampol Gas Monitor Operations

AS AT 03 SEP 2026 15:27

Since the last pull - what moved

PULL AGAINST PULL. Between the register pull of 02 Sep 2026 18:30 and this one at 03 Sep 2026 15:27: **93 monitors came back**, **207 went out**, 9 changed hands and **0 crossed 30 days** still out (0 crossed 60, 0 crossed 90). Monitors on hire: **543** at the last pull, **657** at this one. Every row is a barcode read from the two exports - crew, custody and repair lines alike; nothing is estimated.

Came back - A to Z; showing 5 of 93 monitors

BOOKED TO	COMPANY	ASSET	WAS OUT
After Hours Hire account	Ampol	CTX011/517	1d
After Hours Hire account	Ampol	CTX011/111	1d
After Hours Hire account	Ampol	CTX011/293	1d
After Hours Hire account	Ampol	CTX011/064	1d
After Hours Hire account	Ampol	CTX011/474	1d

Went out - A to Z; showing 5 of 207 monitors

BOOKED TO	COMPANY	ASSET	OUT FOR
After Hours Hire account	Ampol	CTX011/582	0d
After Hours Hire account	Ampol	CTX011/540	0d
After Hours Hire account	Ampol	CTX011/158	0d
After Hours Hire account	Ampol	CTX011/081	0d
After Hours Hire account	Ampol	CTX011/385	0d

Booked to = the person or SiteIQ account the monitor is on hire to. **After Hours Hire account** is the SiteIQ account the store books draws to outside opening hours - an account, not a person. Every asset in these lists is a Dräger X-am 5000 gas monitor from the fleet register.

Crossed 30 days between the pulls - oldest first; 0 monitors

OUT	SINCE	BOOKED TO	COMPANY	ASSET
No monitor crossed 30 days between the pulls.				

Companies with a monitor out now that had none at the last pull: **ARL, CXC Corporate Services, Programmed, Team Furmanite**. Companies cleared since the last pull: **none**. Changed hands: CTX011/589 (Wade Mathews to Sastra Davuth); CTX011/636 (After Hours Hire account to Phalla Chhen); CTX011/123 (After Hours Hire account to Phalla Chhen) and 6 more.

The 24 hours before the pull - 02 Sep 2026 15:27 to 03 Sep 2026 15:27, every fleet monitor

219 draws and **269 returns** of fleet monitors in the window - 325 distinct monitors across 15 companies, counted from every TRANSACTIONS row whose barcode is on the gas monitor register (custody and workflow lines included). Busiest: **Wood** with 156 movements.

Where these numbers come from

Two SiteIQ exports, pulled together on **03 Sep 2026**, are the only inputs to this report. The table shows how much each window holds, so any figure on the pages that follow can be traced back to the rows it was counted from.

WINDOW	DATES	CREW DRAWS	BACK SAME DAY	NOT SAME DAY	PEOPLE	COMPANIES
Year to date	01 Jan - 03 Sep 2026	65,416	54,096 82.7%	11,320 17.3%	848	55
Last 3 months	01 Jun - 03 Sep 2026	25,620	21,497 83.9%	4,123 16.1%	658	48
Last 30 days	04 Aug - 03 Sep 2026	6,440	5,249 81.5%	1,191 18.5%	259	32
Yesterday	Wed 02 Sep 2026	282	258 91.5%	24 8.5%	49	20

Crew draws exclude the custody and workflow accounts (Dräger service, FCCU, Operations, Future Fuels, After Hours) - 2,730 of the 68,146 gas monitor rows in the log this year. The after-hours account is "AFTER HOURS HIRE - GAS MONITORS & RADIO BATT." in SiteIQ; it prints as **After Hours Hire account**. Windows include both end dates; the log closes at 05:59 on the report day, so "today" is not a window.

RENTAL_STOCK - THE REGISTER

What SiteIQ holds as **On Hire** (and to whom) and **Available for Hire** at the moment the export is pulled - here **03 Sep 2026 15:27**. It is where the position, the overdue list and the custody holdings come from.

TRANSACTIONS - THE MOVEMENT LOG

Every scan out and every scan in since **01 Jan 2026 06:00**, one row per monitor per draw, with a transaction ID and the time to the second. The store scans twice on the way out and twice on the way back, so a row only exists when a monitor physically crossed the counter. Every rate, trend and league comes from these rows.

WHAT A DRAW IS

One monitor, out to one named person, once. A person who takes three monitors at 05:00 is three draws. That is why the yearly count is large - the site draws hundreds a day - and why the behaviour measure is the **percentage** back the same day, not the count.

NOT RETURNED SAME DAY

A draw not scanned back on the calendar day it went out. A return scanned from the return box by 05:30 next morning counts as same day - the store scans the box at shift start, before it opens at 07:00 (113 of the last 30 days' draws came back that way); a draw at or after 15:00 counts as same day if back by 08:00 next morning. A draw still open counts as not returned. One rule for every person and company.

COUNTED, NEVER TYPED

Nothing on these pages is keyed in, adjusted or read from a summary cell. The two exports are read exactly as pulled and every figure is counted from their rows, so anyone with the same two files can re-derive any number here. The Excel workbook is not used.

BARCODES AND SERIALS

SiteIQ identifies a monitor by its **barcode**; the Dräger serial rides alongside for the calibration paperwork. **821 of the 878** monitors on the register carry a serial on the list; 57 do not - 54 of them in the AMP088 range and show a dash until the list is completed.

Ampol Gas Monitor Operations

AS AT 03 SEP 2026 15:27

Yesterday - did they come back?

On Wednesday 02 Sep, 282 monitors went out to crew. 24 were not back by the end of the day (91.5% came back same day). 10 of those have come back since; 14 are still out as at 15:27 and are named below - that is the prestart chase list.

COMPANY	NOT BACK	RECOVERED	STILL OUT	WHO STILL HAS THEM (UNITS)
Contract Resources	9	6	3	Marcus Waratini (1), Phil Dalley (1), Karl Callow (1)
Enermech	3	0	3	Mitchell Barrington (3)
Wood	4	2	2	Daniel Hennessey (1), Andrew Hill (1)
Ampol	3	1	2	Cameron James (1), Vinod Watson (1)
Enprocon	2	0	2	Travis Logan (2)
NDE Solutions	2	1	1	Laiju Joy (1)
Armstrong Flow Control	1	0	1	Smit Patel (1)

Cycle check: 24 = 10 recovered + 14 still out. The register (RENTAL_STOCK) shows 12 monitors on hire to a person since yesterday - the difference is explained on the data page. Gas monitors come back daily for bump testing, charging and inspection.

ALERTS & ACTIONS

- 14 monitors from yesterday still out
Named above by person. A monitor out overnight has missed its bump test - a safety conversation first, a hire conversation second.
- 35 monitors overdue 30 days or more
\$70,000 exposure at \$2,000 per unit. A recovery conversation, not a debt notice - every unit is named in Appendix A.
- 9 monitors overdue 8-29 days
The follow-up window - these become 30+ if nobody rings.

Who is not bringing them back - last 30 days

Between 04 Aug - 03 Sep 2026, 259 people drew a monitor. 139 kept at least one past the day it went out, and 50 did so in 3 or more separate weeks - that is a habit, not a bad day. Ranked by non-returns in the last 30 days; the 3-month and year-to-date columns show whether the pattern is new or long-standing.

WHO	DRAWS 30D	NOT SAME DAY 30D	SAME-DAY % 30D	LAST 3 MONTHS	YEAR TO DATE	STILL OUT NOW

Plus 127 more people with 529 non-returns between them in the last 30 days - all counted in the company table. Named people only: custody and workflow accounts are reported on their own lines. "Not same day" = not scanned back on the calendar day it went out (a return scanned from the return box by 05:30 next morning counts as same day; a draw after 15:00 counts as same day if back by 08:00 next morning). "Still out now" is from the live register at 15:27. Same-day % is green from 85, amber from 70, red below.

Who is not bringing them back - year to date

Since 01 Jan, 848 people have drawn a monitor and 558 have kept at least one past its day. The 15 names below account for 4,764 of the year's 11,320 non-returns (42%). The 3-month and 30-day columns show whether it is still happening; "last" is the most recent non-return.

WHO	DRAWS YTD	NOT SAME DAY	SAME-DAY %	LAST 3 MONTHS	LAST 30 DAYS	LAST	LONGEST	STILL OUT
Marcus Waratini Contract Resources	2,308	732	68%	279 of 992	71 of 331	03 Sep	55d	3

Not returned same day, last 30 days - by company, top 8

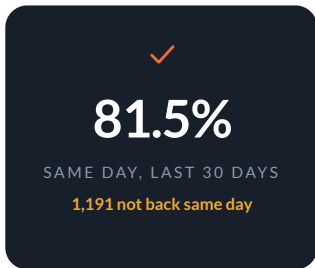

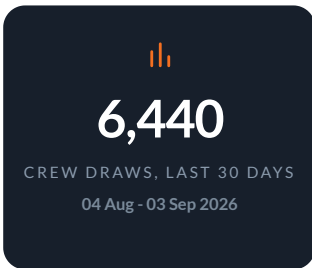

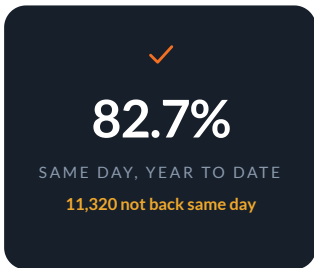

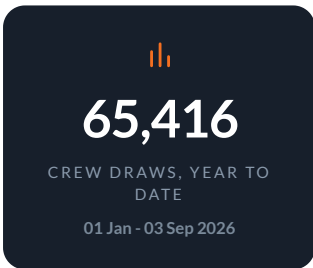

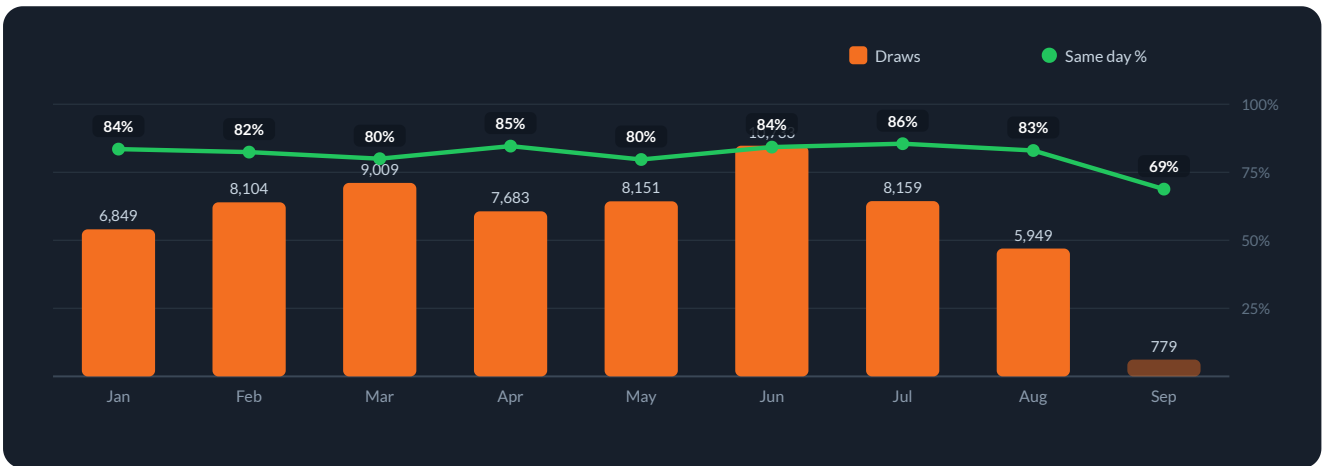

Ampol Gas Monitor Operations

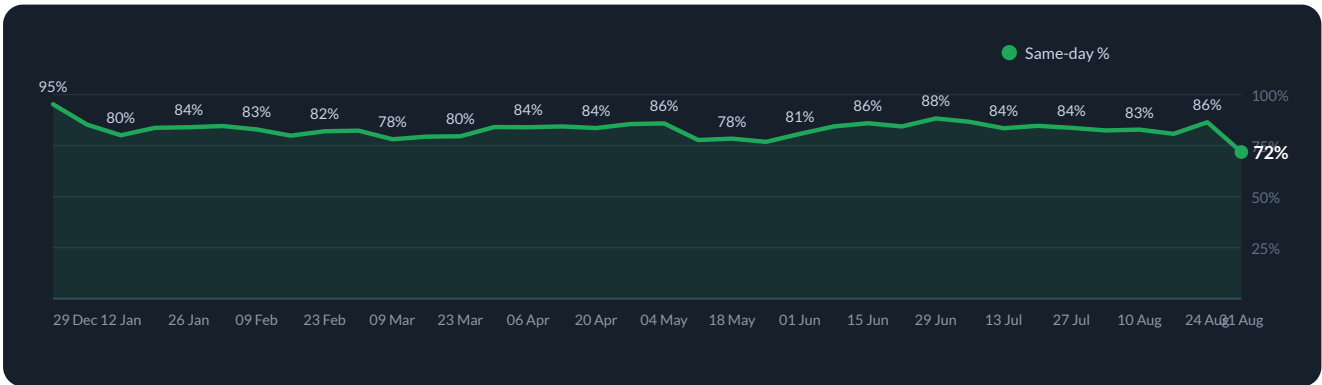

AS AT 03 SEP 2026 15:27

The year so far - volume and behaviour by month

Since 01 Jan, crews have drawn a monitor 65,416 times - about 383 a working day - and 82.7% came back the same day. The last 30 days ran at 81.5% on 6,440 draws. The bars are monthly draws; the line is the share back the same day - the last bar is a part month. The year-to-date total is large because the site draws hundreds of monitors a day - the behaviour measure is the percentage.

Same-day return rate by week - every week of the year (current week is partial)

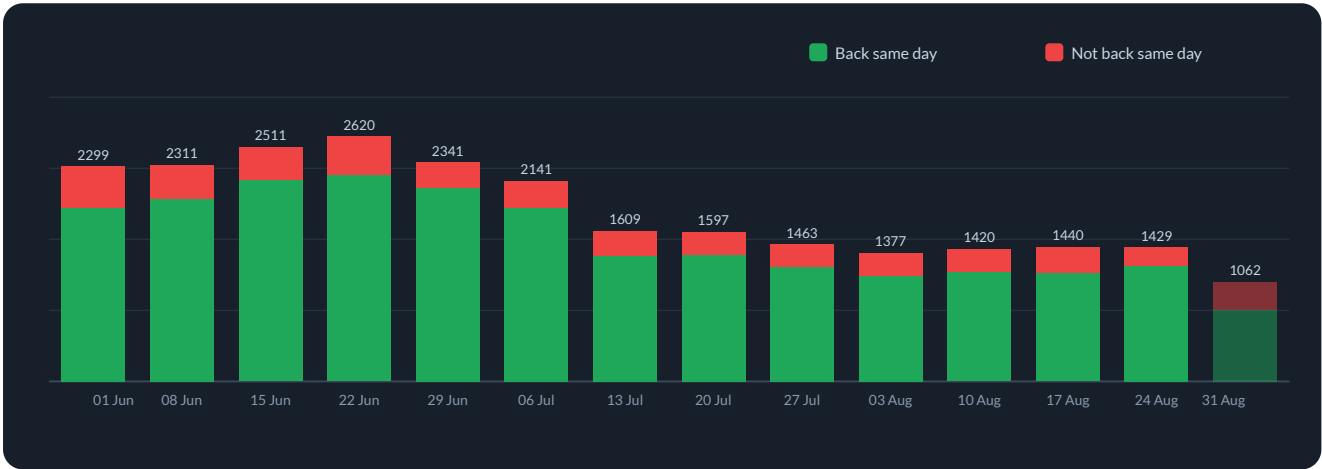

Each point is same-day returns ÷ crew draws for the week starting on the date shown.

Ampol Gas Monitor Operations

AS AT 03 SEP 2026 15:27

The last 3 months - week by week

25,620 crew draws between 01 Jun - 03 Sep 2026, and 83.9% came back the same day - 4,123 did not. 658 people drew a monitor in the quarter and 388 kept at least one past its day. The window is the 13 full weeks before this one plus this week so far, so the bars add up to the total. Each bar is a week starting on the Monday shown: green is back the same day, red is not - the last bar is this week so far. The worst week for non-returns began 01 Jun (442 of 2,299); the best began 29 Jun (88.3% same day).

CSA	Critical	0	0	1	\$2,000	Carter Rowlands (1)

Showing 10 of 15 companies with gear overdue - the other 5 hold 6 units between them, all in Appendix A. Ranked by 30+ day items, then overdue count. The three to ring first: Ampol, Wood, Contract Resources.

Custody holdings - 316 monitors, not crew, tracked separately

HOLDING	UNITS	HELD FOR	WHAT IT IS
FCCU turnaround custody	178	29-57 days	bulk issue to the FCCU turnaround, held on the Dräger FCCU custody line
Ampol Operations	31	54-55 days	Ampol Operations holding
Future Fuels	87	675-685 days	long-term issue to the Future Fuels project
After Hours Hire account	20	today	after-hours draws booked to a shared account - no person is named on them

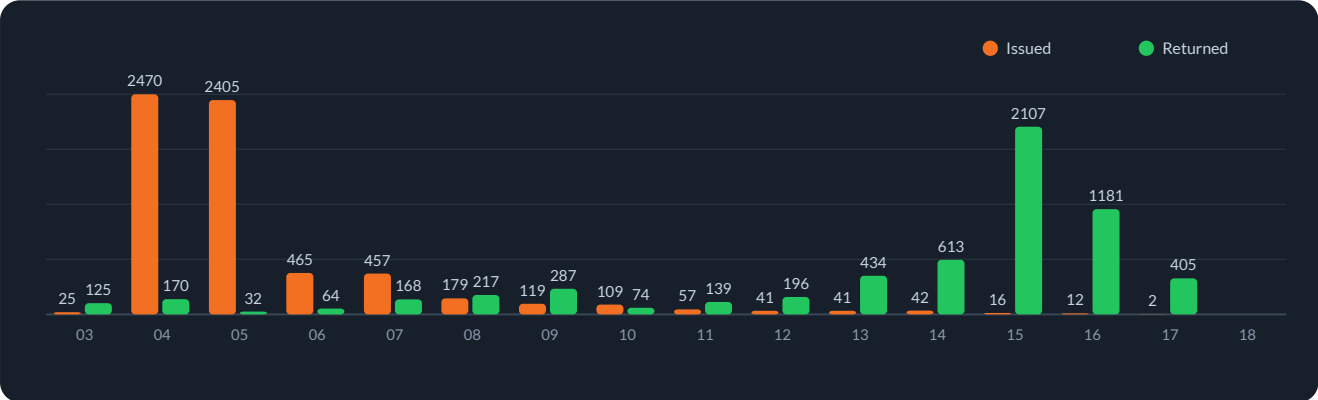

Ampol Gas Monitor Operations

AS AT 03 SEP 2026 15:27

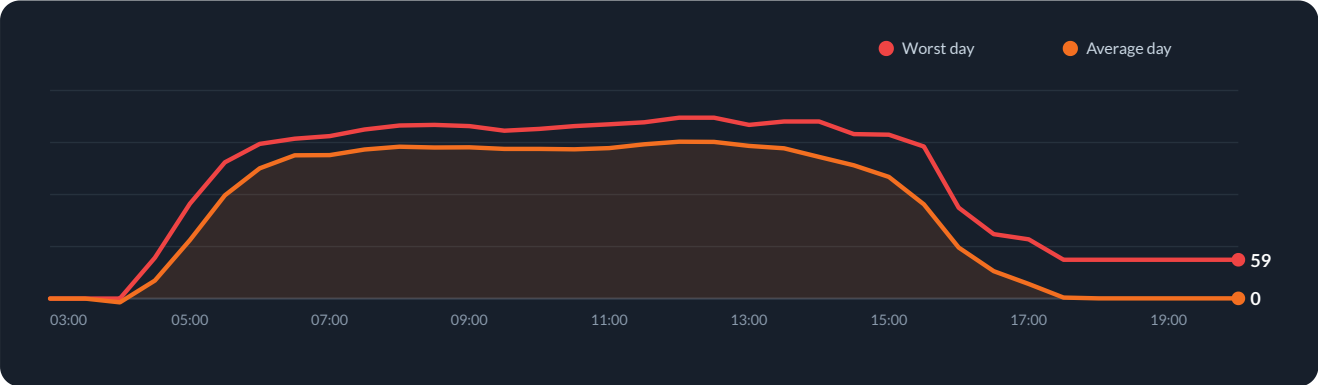

The daily rhythm - when monitors move (last 30 days)

76% of draws happen before 06:00; the median monitor goes out at 05:11 and comes back at 15:26. The record hour: 170 draws between 05:00 and 06:00 on Mon 10 Aug - one every 21 seconds. Between the morning surge and the afternoon wave the shelf carries the whole site - that is the daily squeeze in one picture.

Issues and returns by hour of day - 04 Aug - 03 Sep 2026

Net monitors drawn from the store through the day - average and worst of the last 10 working days

238

AVG NET DRAW BY MID-MORNING

issues less returns, same day

275

WORST RECENT DAY

same measure

05:11

MEDIAN ISSUE TIME

the morning surge

15:26

MEDIAN RETURN TIME

the afternoon wave

The curve counts every same-day issue minus every same-day return, half-hour by half-hour, custody movements included. It is why the 250-unit availability target exists: the shelf must survive from the surge to the wave.

Ampol Gas Monitor Operations

AS AT 03 SEP 2026 15:27

The shift rhythm - draws and returns by weekday and hour, year to date

Every crew draw since 01 Jan 2026 laid on a week: **4,552 draws** in the busiest cell (Thu 05:00-06:00), returns peaking on Tue 15:00-16:00 with **4,227**. Weekdays carry **64,072** draws against **1,344** on weekends, and **30%** of all draws happen between 19:00 and 05:00 - the after-hours window where the same-day rule does its work.

Draws - darker is quieter, orange is busier; the count is printed in every cell

	00	02	04	06	08	10	12	14	16	18	20	22

Counted from every crew transaction in the TRANSACTIONS export (01 Jan - 03 Sep 2026), custody accounts excluded; a cell is the number of draws (or returns) whose scan fell in that weekday and hour. A dark cell is a real zero. Read the two grids together: the gap between the draw peak and the return peak is the shift, and the after-hours cells are where monitors go out after 15:00 and come back before 08:00.

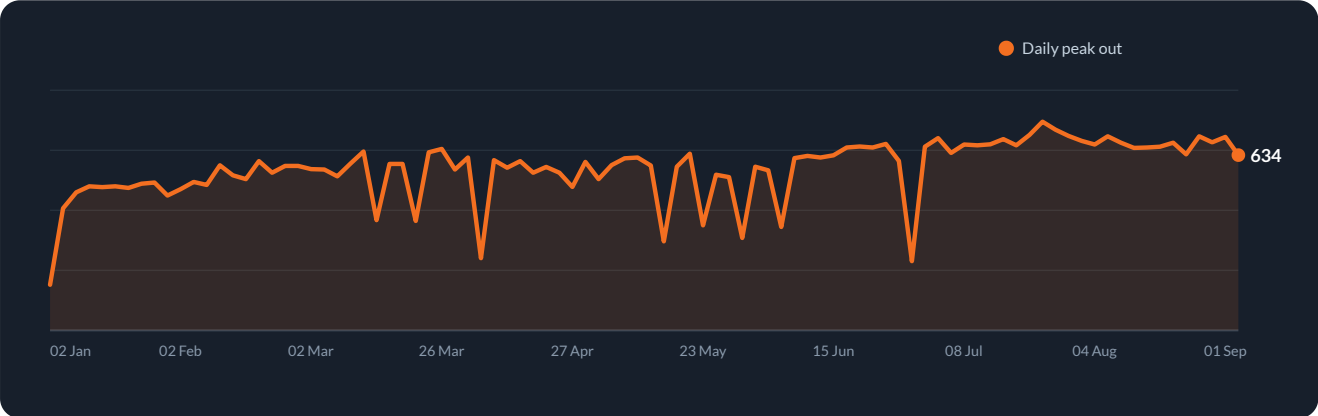

Ampol Gas Monitor Operations

AS AT 03 SEP 2026 15:27

Demand - monitors out at once, year to date

The record is **755 monitors out at once** at 10:33 on Thu 23 Jul - against **878 owned** and **813 usable** once the 65 in repair are set aside. In the last 30 days the peak was **726** on Wed 05 Aug. Every unit in custody or in the workshop is a unit the shelf cannot lend.

Peak monitors out at once, by day - 01 Jan - 03 Sep 2026

How long monitors stay out - every completed crew draw, year to date

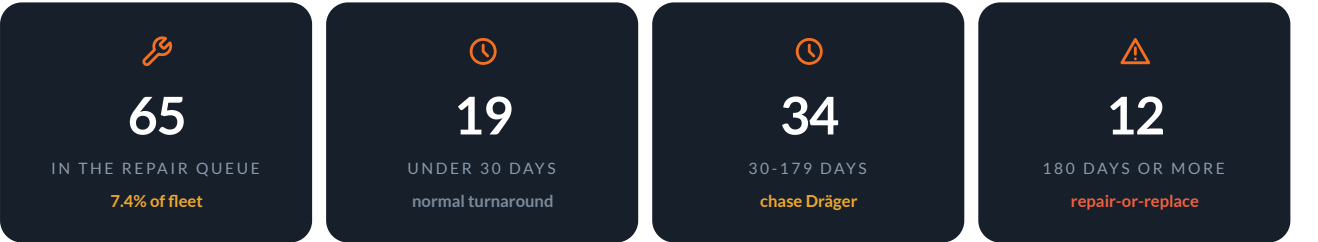

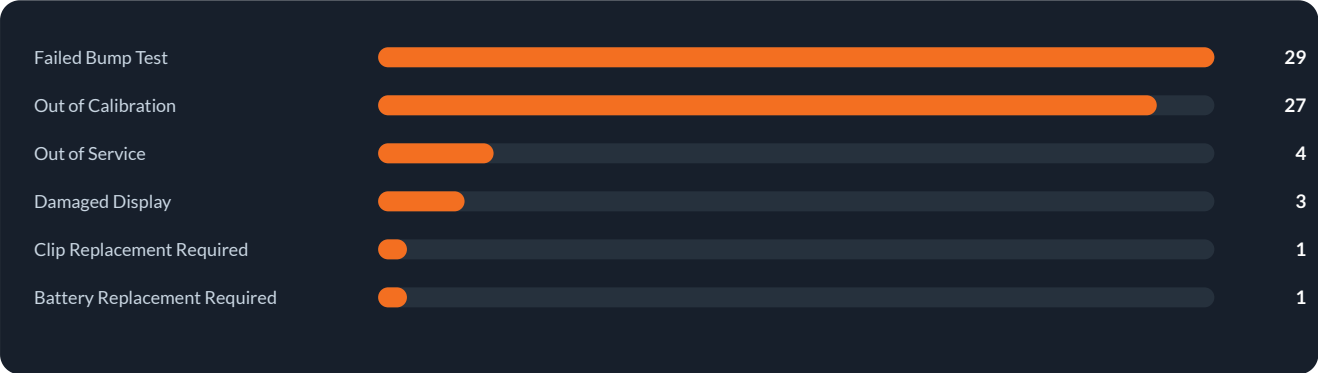

Concurrency counts every open transaction in the export window, custody included. Items issued before the window opened sit outside it, so the register's on-hire figure runs higher; the register is the authority for right-now counts. The longest completed hold on record: **136 days** by **Eamon Rees** (Wood).

Out of service - the Dräger repair queue

65 monitors are in the repair queue - 7.4% of the 878-unit fleet a crew cannot take. Largest category Failed Bump Test. 12 unit(s) have been in the queue 180 days or more - the oldest at 576 days. That is not a repair queue, that is dead fleet: a repair-or-replace call.

Repairs by status

Longest in the queue - oldest first

ITEM	ASSET / SERIAL	IN STATUS	REPAIR STATUS
Dräger X-am 5000 Gas Monitor (ARSM-0808)	AMPMAINGAS001/144 ARSM-0808	576d 04 Feb 2025	Out of Service
Dräger X-am 5000 Gas Monitor (ARHD-0561)	CTX011/533 ARHD-0561	568d 12 Feb 2025	Out of Service
Dräger X-am 5000 Gas Monitor (ARLK-0567)	CTX011/198 ARLK-0567	567d 13 Feb 2025	Out of Service
Dräger X-am 5000 Gas Monitor (ARHD-0621)	CTX011/604 ARHD-0621	240d 06 Jan 2026	Out of Calibration
Dräger X-am 5000 Gas Monitor (ARHD-0786)	CTX011/525 ARHD-0786	239d 07 Jan 2026	Failed Bump Test

Days in status are counted from the on-hire scan onto the Dräger custody line. A monitor that fails bump goes onto the Failed Bump Test line the same day, so this is a fair measure of turnaround.

Appendix A - overdue monitors, oldest first

Every monitor on hire to a named person with an on-hire date before 03 Sep 2026: 77 units. Gear issued today (199 units) is on its normal cycle and is not listed. Red at 30 days or more, amber at 8-29. Replacement charge \$2,000 per unit.

Replacement charge exposure - 35 units at 30 days or more

\$70,000

If nothing on this list came back at all the exposure would be \$154,000 across 77 units. Serials from Ampol_Master.xlsx, Gas serials tab; a dash = not on the list.

Data and method - where every number comes from

SOURCE FILE	WHAT IT GIVES THE REPORT	PULLED	COVERS
RENTAL_STOCK.xlsx	Where every monitor is right now - status, who has it, on-hire date	03 Sep 2026 15:27	the live register at the pull
TRANSACTIONS.xlsx	Every issue and return scan with a timestamp - sheet CUSTOMER_CONTRACTOR_EQUIP	03 Sep 2026 13:58	issues 01 Jan 06:00 to 03 Sep 2026 05:59; returns to the pull
Ampol_Master.xlsx	Serial number for each barcode - display only	-	not a source of counts
Ampol Gas Monitor Report.xlsm	Not used - its summary tab is what the old report quoted	-	not a source of numbers

The rules

Gas monitor	Description contains "X-am" or "gas monitor". Chargers and probes are not monitors.
Crew draw	A transaction to a named person. Dräger service statuses, FCCU and Operations custody, Future Fuels and the After Hours account are workflows, not people - reported on their own lines, never as a person.
Same day	Scanned back on the calendar day it went out. A draw at or after 15:00 counts as same day if back by 08:00 next morning. Draws still open are not same day.
Overdue	On hire to a person with an on-hire date before the report date. Gear issued today is "out today", not overdue. Days are counted from the on-hire scan.
Windows	Year to date = the transactions export (01 Jan - 03 Sep 2026). Last 3 months = the 13 full weeks before this one plus this week so far (01 Jun - 03 Sep 2026). Last 30 days = 04 Aug - 03 Sep 2026. Yesterday = 02 Sep 2026, the last complete day. Repeat = a non-return in 3 or more separate weeks of the last 30 days.
Exposure	\$2,000 per monitor overdue 30 days or more - the replacement charge from the Ampol gas monitor workbook. Never estimated.
Health score	Plain average of availability, 30-day same-day rate, repairs and 30+ day control. Each formula is printed beside its score on the position page.
The log, checked	TRANSACTIONS, sheet CUSTOMER_CONTRACTOR_EQUIP, report period 01 Jan 2026 06:00 to 03 Sep 2026 05:59. Short hire = a hire closed inside 6 minutes. Mass draw = one person drawing 15 or more items inside one hour. Product key = the description with its size and serial tail removed.

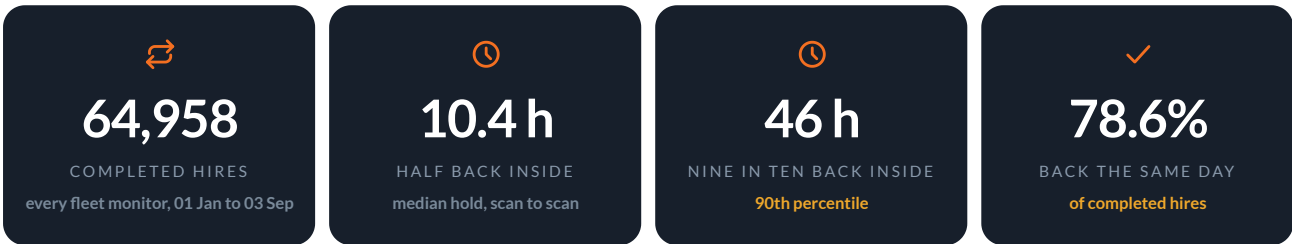

Reconciliation - the two exports checked against each other

Check 1	RENTAL_STOCK shows 657 monitors on hire; TRANSACTIONS holds 579 open transactions; 506 match by barcode.
Check 2	151 on-hire rows have no open transaction: 90 were issued before the transactions window opened (01 Jan 2026) and 61 after it closed (03 Sep 2026 05:59) - Future Fuels 87, crew 37, After Hours Hire account 20, repair 7.
Check 3	73 open transactions have no on-hire row in RENTAL_STOCK - returned between the two pulls, or a barcode change.
Check 4	Yesterday's unreturned draws still open in TRANSACTIONS: 14; RENTAL_STOCK rows on hire since yesterday: 12. The difference is gear issued yesterday after the transactions window closed, or returned between the two pulls.
Check 5	Serial list: 821 of the 878 monitors on the register carry a serial on it; 57 do not (54 of them in the AMP088 range). Barcode is the identity SiteIQ scans; the serial is display only. 1 serial(s) appear against two barcodes (ARHD-0595 = CTX011/583, AMP088/018) - usually a re-labelled unit whose old barcode was never retired from the list.
Check 6	50 barcodes moved this year but are no longer on the register (returned to Dräger, re-labelled or written off): their 2,609 draws are counted in the flow figures, and they are not in the position.

Trend page: appears once seven days are on record (2 today). Australian dates, metric units, 24-hour time. Anything the source does not carry is shown as a dash, never guessed.

The log, checked - return windows, scan habits and who holds the fleet

EVERY COMPLETED HIRE, COUNTED. 64,958 completed monitor hires in the log, 01 Jan to 03 Sep 2026: half back inside 10.4 hours, **nine in ten inside 46 hours**, 78.6% the same day. The rows to read around: **195 hires closed inside 6 minutes**, 1,030 mass draws (15 or more monitors to one person in an hour - kits for a crew or a custody line), 0 on hire with no movement since the log began, and 90 issued before it opened - history, not a gap.

Six-minute hires - 6 of 195 hires, newest first

So what: hold crews to the 46-hour line the fleet already runs on; the six-minute hires and the mass draws are scan habits to read around, not hires to chase.

Who holds the fleet, ranked by units: **15 of the 88 holders** on the register carry 80% of the 657 monitors on hire, 6 of them custody and workflow accounts, not people. Counted from TRANSACTIONS (sheet CUSTOMER_CONTRACTOR_EQUIP, 01 Jan 2026 06:00 to 03 Sep 2026 05:59); rules on the data page.

Ampol Gas Monitor Operations

The tool store has your back

SCAN AND LOOK - EVERY TIME

Every monitor is scanned **and** sighted going out, and scanned and sighted coming back. If it moved, it is on the record. That is your protection as much as ours.

BUMP, CHARGE, INSPECT - DAILY

Gas monitors come back **every shift** for bump testing, charging and inspection. A monitor out overnight has not been bump tested - that is a safety follow-up, not a hire question.

OUT OF CALIBRATION IS OUT OF SERVICE

Anything out of calibration comes off the shelf. You will never be issued a monitor we would not carry ourselves.

NUMBERS YOU CAN CHALLENGE

Every score on the position page prints its own arithmetic and every figure is counted from the SiteIQ exports named on the data page. Nothing is weighted behind the scenes and nothing is estimated.

BREAKDOWNS - TELL US EVERYTHING

Something stops? Tell us **where it is, what is wrong, what it was doing**. We will get it swapped or fixed - no drama, no waiting.

RECONCILED BEFORE IT IS SENT

The register and the transaction log are checked against each other on every build. Any difference is printed on the data page, not quietly dropped.

THE COATES WAY · OUR OPERATING MODEL, OUR STANDARD, OUR WAY

Australia's most trusted equipment partner - delivering Best Service & Value.

PURPOSE Supporting Australia's growth with leading equipment solutions.

Care Deeply (safety & wellbeing first, always) · **Customer Focused** (listen, anticipate, exceed expectations) · **Be Our Best** (accountability, learning, determination) · **One Team** (collaborative, trusted, inclusive) · **Competitive Spirit** (set stretch goals, be THE best)

SCORECARD Green - on track · Amber - at risk · Red - action needed: a documented root cause, corrective actions, an owner and a deadline.

WHERE THIS REPORT SITS **Operational Excellence, Performance-led Results, Safety First, Cadence** · same-day returns are Trait 4's 'returns processed same day'; every overdue unit carries an owner and a date

Every figure in this report is counted from the SiteIQ exports named on its data page - nothing is estimated, weighted or typed in. Wording: The Coates Way, branch edition, July 2026.

Meet the tool store team

The crew running your Ampol store - getting the right gear to the right people, keeping it tested and ready, and making sure everything that leaves the store is right. Something not on hand or not right? Tell us and we'll sort it.
