

DIPHOTERINE EMERGENCY RINSE — STORE SOP & ISSUE PROCESS

Coates Shutdown Store · Storage Container: Cement Safety

Author: Andrew Fisher
AS at 27 Jul 2026

WHAT IS HELD, AND WHERE

32 single-use emergency chemical-splash rinse units are held in the Coates Shutdown Store, in the Cement Safety storage container, for issue to Cement Australia crews on the K2 shutdown. They are loaded in SiteIQ under Product Family and Product Name 'Cement Safety', category Rental, one barcode per unit, quantity 1 each.

EYE — 50 mL SIEW

SKU: CEME9016-590730
Qty held: 14 · DIPH50K2001 – DIPH50K2014
Not a Dangerous Good
SDS 02 Dec 2022 rev 4.1

ISSUING A UNIT — the rundown

- 1 Match the product to the hazard. Eye splash = 50 mL eye wash. Skin splash = 100 mL Micro DAP. Diphoterine has limited action on hydrofluoric acid or acidic fluorides — that needs Hexafluorine.
- 2 FEFO — first expiry, first out. SiteIQ has one SKU per expiry, so every unit inside a SKU is the same date. For the spray, empty CEME9016-590834 (2027-10-14) before you touch CEME9016-590835 (2027-11-18). Eye wash is one SKU, CEME9016-590730, so any unit is fine.
- 3 Check the expiry stamp: on the Micro DAP it is on the lower can body, on the eye wash it is on top of the orange cap. Format YYYY-MM-DD. Must be in date and stay in date for the whole issue period.
- 4 Check the unit: seal and cap intact, eye-cup clip in place, no dents, cracks, leaks or corrosion, solution clear and colourless, label readable.
- 5 Scan the barcode OUT in SiteIQ against the person's name. If SiteIQ is down, write the line on the sign out sheet and enter it the same day.
- 6 Brief them in one line: single-use, use it within 10 seconds, use the whole thing, then report it and get seen by a medic.

TAKING ONE BACK — the only question is 'is it still fit to issue'

- 7 Seal intact, unused, still in date, undamaged — scan IN, return it to the container, log RETURNED UNUSED.
- 8 Seal broken, discharged or part-used — DO NOT RESTOCK. Quarantine and destroy it, replace it the same shift, and raise the incident. A used Diphoterine means someone was splashed.
- 9 Expired, dented, leaking or unreadable — quarantine and replace. Log EXPIRED or DAMAGED.
- 10 Not returned — report it the same shift. This is missing first aid cover, not missing stock.

IF ONE HAS BEEN USED — escalate, don't file it

- 11 Person to medical assessment. Rinsing does not replace being seen.
- 12 Notify the Cement Australia site supervisor and the Coates Shutdown Manager immediately.
- 13 Replace the unit before the next shift so cover is never down, and record what chemical was involved.

MONTHLY — keep it honest

- 14 Count all 32 against the register, check every expiry, check seals and condition.
- 15 Check the container has not been sitting above 50 °C — the Micro DAP is a pressurised aerosol (Class 2.2, UN1950) and may burst if it does. Keep it out of direct sun.
- 16 Anything within 3 months of expiry goes on order now, not on the day it lapses.
