

Utilisation — plant, tool store and consumables

Cement Australia K2 Shutdown 2026 · Gladstone

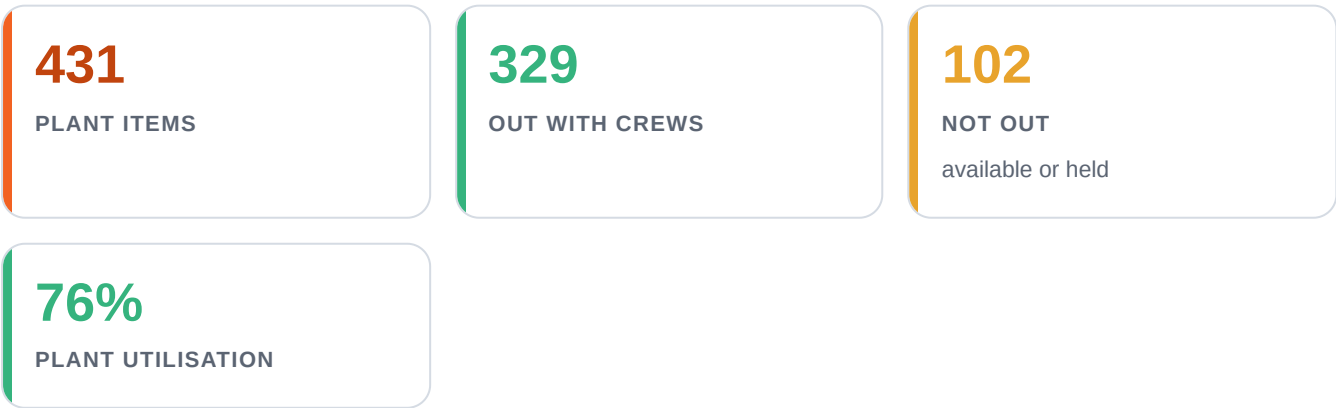

16% of the fleet is out right now · 23% has moved at least once

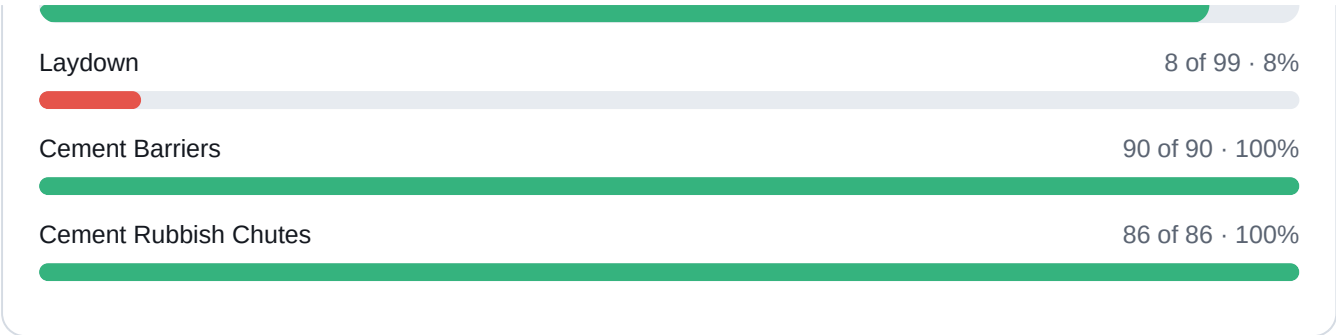

We hold 5,337 items on this site. 857 are with a crew as you read this. Since the shut started, 1,214 have gone out at least once — which leaves 4,123 (77%) that have not moved a single time in 17 days.

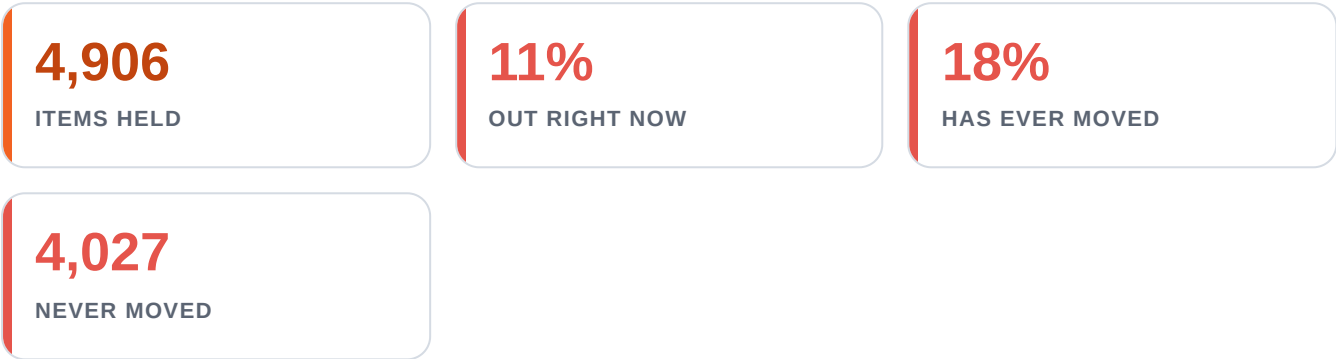

Two numbers, two questions. Out right now is a snapshot — how hard the fleet is working today. Has ever moved counts anything that has gone out once since 13 Jul 2026 — what we mobilised that has never earned its freight. They are not interchangeable, and cutting a fleet on the wrong one is how a store runs out of something it just sent back.

PLANT

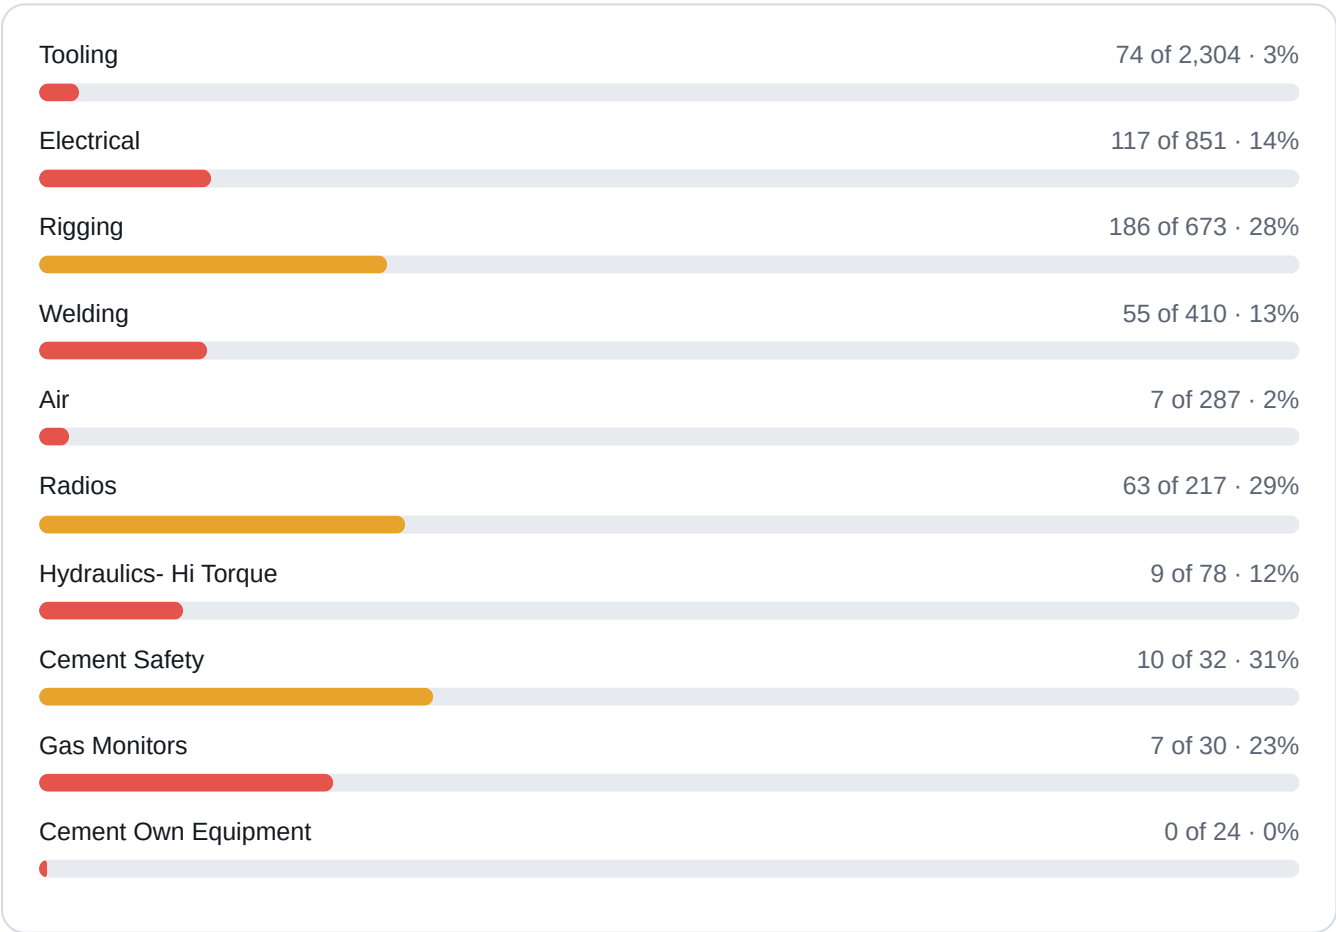

TOOL STORE

BY STORAGE UNIT — HOW MUCH OF EACH AISLE IS OUT

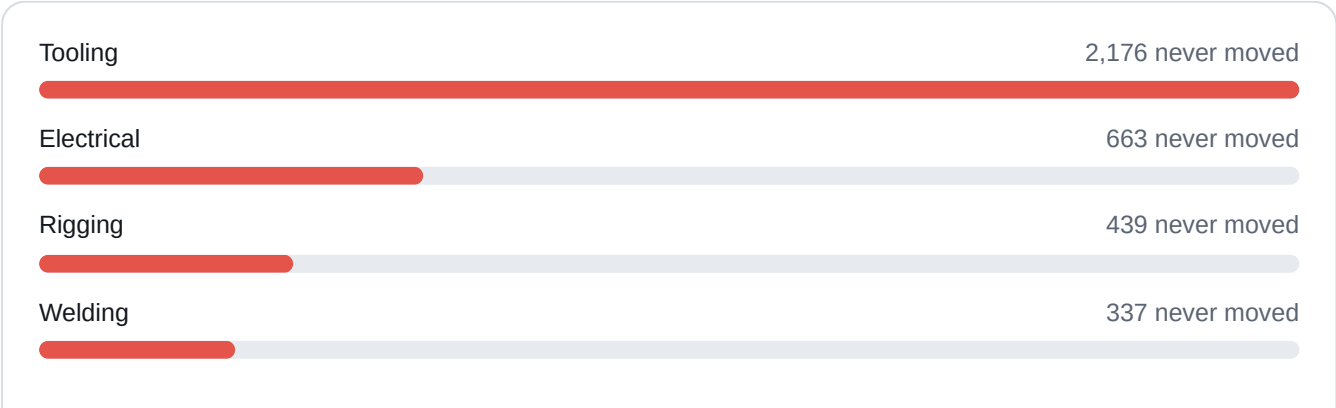

BY STORAGE UNIT — HOW MUCH HAS EVER MOVED

STORAGE UNIT	ITEMS	OUT NOW	EVER MOVED	NEVER MOVED	READING

NEVER MOVED — 4,123 ITEMS

Read this one carefully before acting on it. "Never moved" means the barcode has not been charged, has not been recorded going out without charge, and is not on hire right now. Some of it is spares we are right to be holding — a store with no spare grinder is a store that stops a job. The list is here to be argued with, not actioned blind.

NEVER MOVED

on the shelf all job

7 duplicate SKU record(s) folded away. SiteIQ carries the same item on two SKU records and will not merge them, so this page does it instead: the duplicate's stock, counts and sales are absorbed into the live line and the false "stock low" flags they used to raise are gone. One item, one line, the true total.

SAYS "STOCK LOW" — BUT THE COUNT FOUND STOCK

Do not order these. The system has them at zero, the stocktake found gear on the shelf. Post the count in SiteIQ and the flag clears.

ITEM	SKU	SYSTEM SAYS	COUNT FOUND
SAFETY GLASSES - DAY/NIGHT - K2/26	CEME9016-590710	0	48
ABRASIVE DISC - GRINDING RAISED HUB A30S 115 X 6 X 22 - K2/26	CEME9016-590670	0	40
BATTERY - AAA 1.5VDC ALKALINE PROCELL - K2/26	CEME9016-590675	0	2

DO WE NEED TO ORDER?

Where this comes from. SiteIQ has minimum and reorder fields, which is where a reorder point belongs — on this job **every one of them is set to zero**, so there is no trigger to read. These lines are worked out from what actually went out the window: how fast each one is going since it first moved, against the **12 days** left to 11 Aug 2026. Nothing here is a guess at what we might use; it is the rate we are already using.

WAS THE COUNT RIGHT?

64 of 64 lines counted — 100%. Counted on 17 Jul 2026, 20 Jul 2026, 25 Jul 2026, 26 Jul 2026, 28 Jul 2026, 29 Jul 2026. A count taken before today should differ from today's stock if gear went out since, so anything sold after the count is taken off before a line is called wrong. Today that explains **0** of them — the other **19** are real gaps.

HOW THIS WAS WORKED OUT

"Used" is three signals, not one. A barcode counts as used if it was charged, OR recorded going out without a charge, OR is on hire right now. Charged lines alone would report every radio on this job as never

moved — they go out free-issue and never touch the charge sheet. Reading only the charge sheet put radios at 0%; reading all three puts them at their real 80%.

Counted from the charge feed: **917** barcodes charged, **366** more moved without a charge, **5,295** shifts charged in total.

Status of everything we hold. Available for Hire **4,457** · On Hire **857** · Awaiting Arrival **13** · Pending Baseplan **9** · Failed Baseplan **1**
