

COATES INDUSTRIAL SOLUTIONS · BOOST MOBILE GOLD COAST 500

GC500 Delivery Control

One live record for the whole build, from the truck leaving the yard to the last unit being numbered on site. Every delivery, every dollar and every hour of labour, on one map that anyone on the job can open.

BEST SERVICE & VALUE

As at Tue 29 Sep 2026 · Week 3 of the build
24 days to race day

Built the Coates Way

A street circuit is a big build in a short window: **789 units across 10 trades on 198 references**, sub-hire partners, fencing crews, carriers and a race date that doesn't move. We built GC500 Delivery Control so everyone works from the same picture, and so the customer gets what they ordered, where they need it, when they need it.

CARE DEEPLY

The daily pre-start is prefilled from the record and linked to the SWMS. The install crew get a sheet with photos and the exact spot, so there's less guessing on the road and on the tools.

CUSTOMER FOCUSED

Every reference shows what was asked for and what was supplied. A short delivery is flagged straight away, and the rest of the order can be booked onto another day.

BE OUR BEST

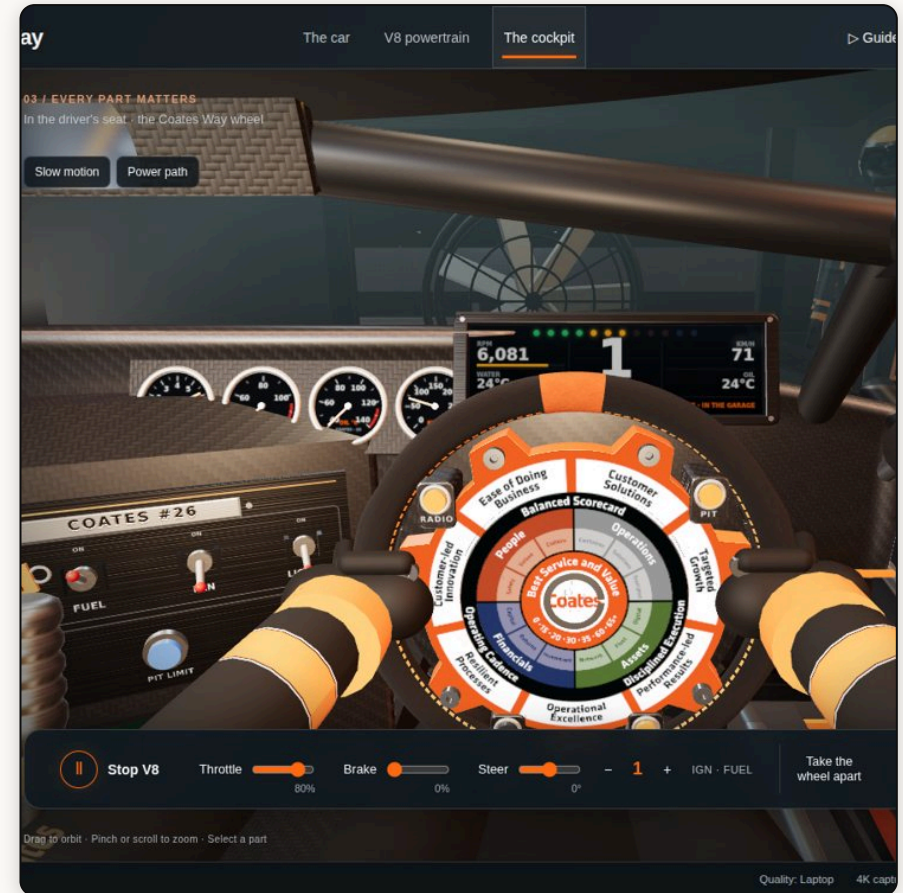

Every figure comes from one record. When something isn't known, the page says "not recorded" rather than guessing.

ONE TEAM

Drivers, installers, the branch and our sub-hire partners all see the same live record. The view link is read-only, so it's safe to share.

COMPETITIVE SPIRIT

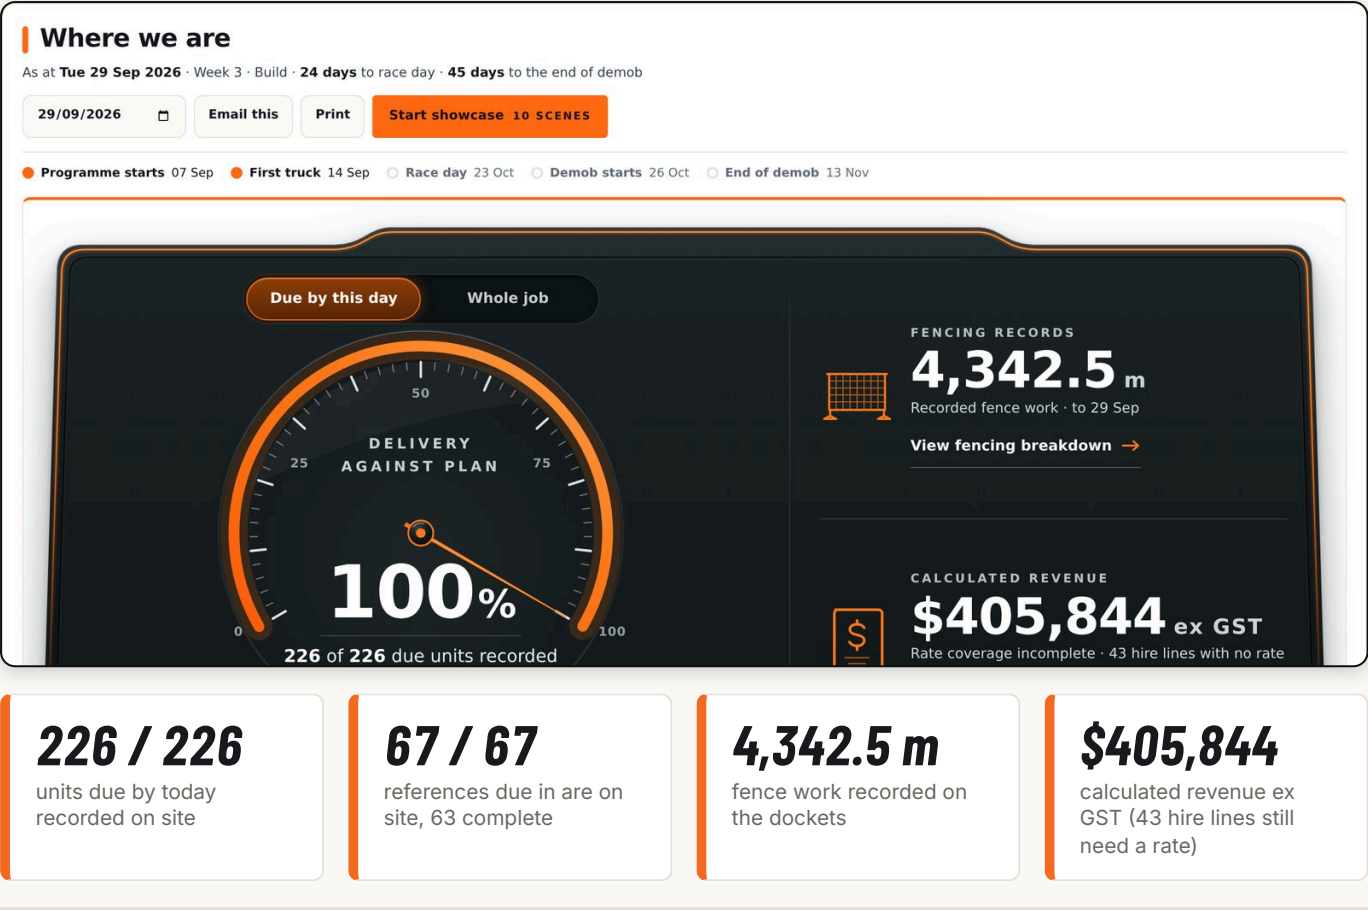

A race-day countdown on every page, and a Showcase that shows the customer the build in 3D, day and night.

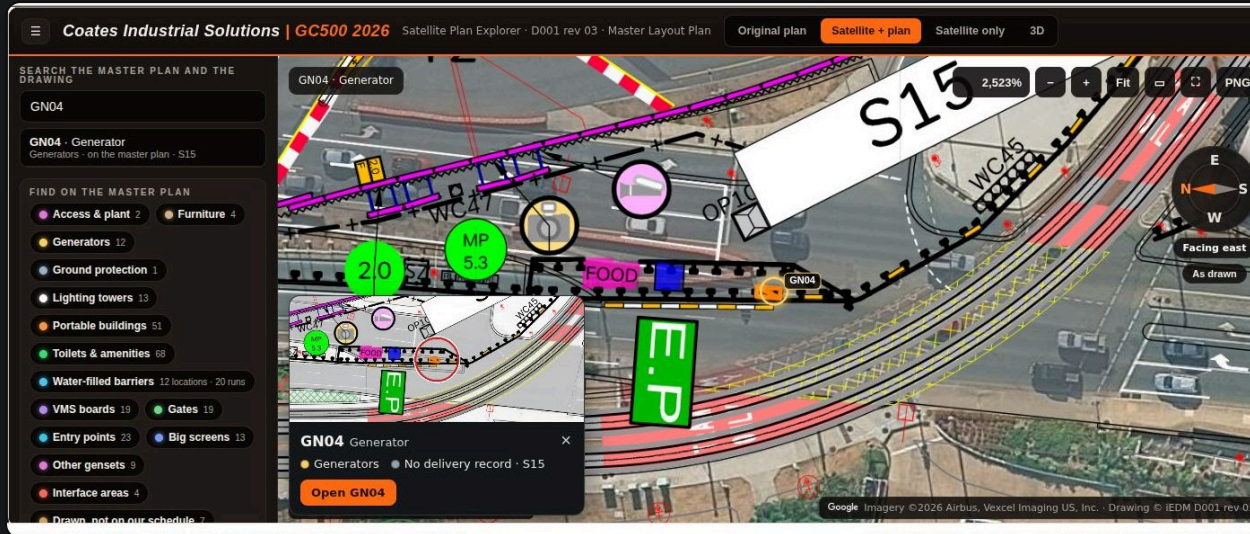

The Coates Way machine inside the dashboard. Best Service & Value is the centre cog, and every part connects back to it.

A nice touch: every day on the Timeline carries one of the five values in turn, so the crew see them each time they check their loads.

On plan, and we can prove it

The master plan, laid on the real world

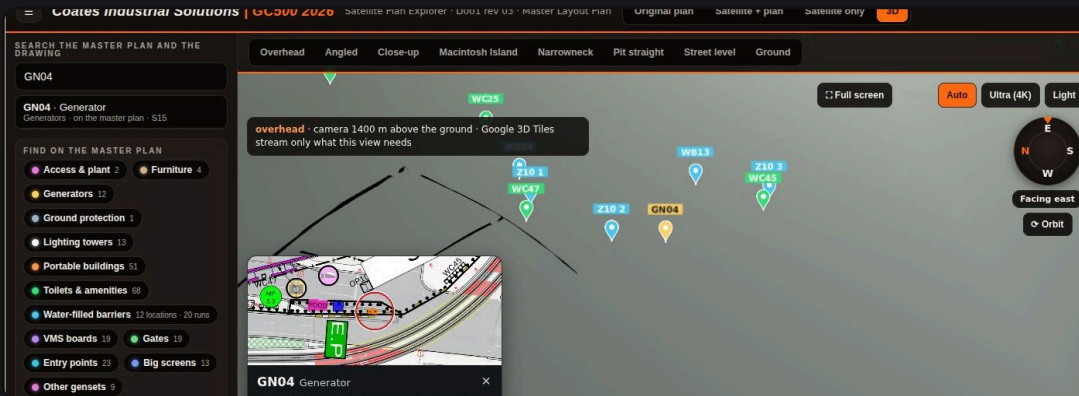

Satellite + plan: the D001 Master Layout Plan lined up on satellite imagery. Search GN04 and it's ringed, and its card shows the plan close-up, the trade and the delivery status.

- **Four views, one map:** Original plan, Satellite + plan, Satellite only and 3D, all on one screen.
- **Search anything:** a reference, a name, an asset number or a map callout. It finds it and flies you there.
- **Find by trade:** chips for toilets, buildings, generators, lighting towers, barriers, VMS boards, gates and more, each with its count.
- **Tap a pin** to see what it is, where its delivery stands, its asset numbers, and who pinned it on the ground from their phone.
- **Navigate:** one tap for Google Maps directions to the exact spot, driving or walking, plus Street View.
- **Fast on a phone:** it opens from pre-rendered tiles. On a desktop the first picture came down from 5.2 s to 1.2 s, and nothing goes blank while you zoom.

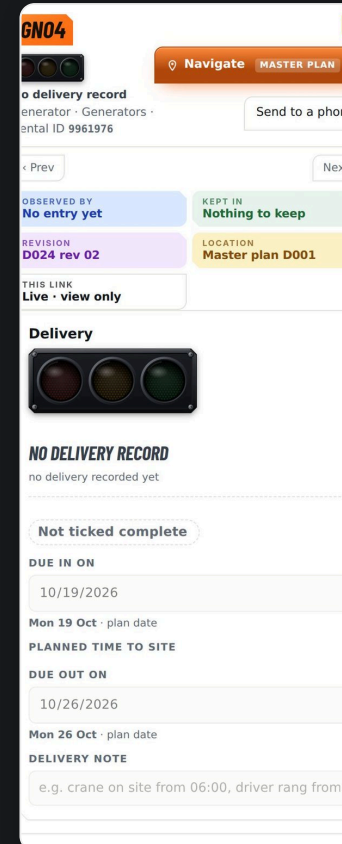

Every unit, standing on a 3D Gold Coast

Google's photorealistic 3D city of the circuit, from Main Beach up to Surfers Paradise.

3D mode in the explorer: the job's own pins, coloured by trade and driven by the same search and chips.

On a phone: the reference card with Navigate, the delivery light and the master-plan close-up.

366

pins placed on the 3D model

0.1 m

pins checked against the master plan to within 0.1 m

4K

Auto, Ultra (4K) and Light settings, so it runs well on any device

- Named views: Overhead, Angled, Close-up, Macintosh Island, Narrowneck, Pit straight, Street level and Ground.
- Compass, orbit and full screen.

Every truck, every day, one line each

A delivery day: one line per load with the time, the carrier, the references on the truck and where they're going. Tap a line to open it.

- **Every day of the programme, 07 Sep to 13 Nov:** what's due in and out, the loads on the carrier's list, and how many are recorded on site.
- **Day documents** sit on every day: **Pre-start, Drivers, Install, Email** and **Edit**.
- **Email** attaches the PDFs themselves, one per load, with no links, ready to go from a phone.
- **Change deliveries:** move a reference to another day, record what turned up, or cancel an order with the reason kept.
- **Short deliveries are flagged:** for example, "WC01: Accessible Toilet 0 of 1". The rest of the order can be booked on a later day, and the money is never counted twice.

15

references due in the next 7 days

Are we making money? An honest answer

Are we making money?

as at Tue 29 Sep 2026 · AUD ex GST

Revenue is what Coates charges the V8s — everything on hire is revenue. A **direct cost** is what Coates pays for the job, named by its Coates P&L line where the record shows which line it is. The two are never added together.

\$405,844

REVENUE

\$218,803

DIRECT COSTS — KNOWN SO FAR

\$187,041

DIFFERENCE SO FAR

6

NOT IN IT YET

STREAM	REVENUE	DIRECT COSTS	DIFFERENCE	STILL TO COME
Fencing Advanced Temporary Fencing — revenue at the 2026 card, hire and installation in one rate · direct costs at their own sheet: Rehire (their gear) and Installation — external contractors (their crew)	\$92,551	\$61,427	\$31,124	58 dockets · Rehire \$59,627 (their gear) · Installation — external contractors \$1,800 (their crew) · green-book labour 9.5 h
Toilets and servicing Event Portables rehire — revenue at our rates · Rehire cost, paid to Event Portables	\$69,092	\$118,575	-\$49,483	Rehire cost: Event Portables \$118,575, approved — the final total may change · 7 of 132 contract lines with no rate yet — the charge for them is missing · servicing is on no contract line: the same servicing at our card's pump-out rates would be \$85,102 — not charged yet
Buildings, containers and furniture our own fleet (KINP)	\$66,992	—	\$66,992 before direct costs	3 of 88 contract lines with no rate yet — the charge for them is missing · 1 subhired line — its rehire cost is not on the record
VMS, water barriers and track mat our own fleet (STPS)	\$81,149	—	\$81,149 before direct costs	
Forklifts and access MEAD and NVAC	\$15,935	—	\$15,935 before direct costs	10 of 15 contract lines with no rate yet — the charge for them is missing · 1 subhired line — its rehire cost is not on the record
Generators and lighting towers NVAC	\$339	—	\$339 before direct costs	23 of 24 contract lines with no rate yet — the charge for them is missing
Delivery and transport Transport Revenue: the delivery and pickup lines on the contracts · Transport (cartage): paid to the carriers	\$6,939	\$21,721	-\$14,782	Transport (cartage): the schedule's TPORT COST figures — only the loads with a figure, the 7 fencing semis to Phillip Park among them (\$8,637; Coates organises their transport) and 6 loads with no reference (\$2,553) · Transport Revenue: the delivery and pickup lines on the contracts; for comparison, the 2026 card's transport charge for the

Shared record · live · view only — this link cannot change it · last confirmed 08:07

Revenue (what Coates charges) and direct costs (what Coates pays) are kept apart, stream by stream, and never added together.

\$405,844

revenue, ex GST

\$218,803

direct costs known so far

\$187,041

difference so far. Not a margin yet: 6 items aren't in it.

- **Labour ticked per piece:** each unit carries its expected labour, and a tick charges it. That's 162 ticks so far, worth **\$17,031**, with \$6,517 on site ready to tick and \$21,528 to come.
- **Event labour scope:** \$55,817, made up of 368.9 h of people plus \$19,102 of accommodation and travel.
- **Hours tracked:** 2,168 h on the tracker, split into ordinary time, ×1.5, ×2 and race weekend, for our crew and our labour-hire contractors.
- **Direct costs** go against the eight categories management expect, with the P&L line where the record shows it: rehire, fencing, transport, accommodation and meals.
- **It shows where money could be missing:** servicing isn't on any contract line. At our card's pump-out rates it would be **\$85,102**, not charged yet. And 43 contract lines still have no rate.

Every figure is worked out from the record, and it's clearly marked where the forecast is incomplete. For example, crew wages are in hours only until a wage rate is added.

What's on site, whose it is, and where it sits

Inventory - on site now Tue 29 Sep 2026 · from the delivery record, so it moves as things are ticked on site

Sub-hired on site: **Event Portables 1** on site (1 at locations)

TYPE	TOTAL ON SITE	SUB-HIRE	SPARE	AT LOCATIONS	COATES NUMBERED	NO NUMBER YET	STILL TO COME	ORDERED
16Pan Block	2	-	0	2	0	2	0	2
Accessible Toilet	2	-	0	2	0	2	2	4
FWF	62	Event Portables 1	0	62	40	21	167	229
FWF Trailer	2	-	0	2	2	0	0	2
Pee Panel	0	-	0	0	0	0	6	6
Toilet Block 6m	9	-	0	9	9	0	6	15
Waste tank	2	-	0	2	0	2	2	4
Total	79	1	0	79	51	27	183	262

Press any number to see which locations are behind it. Total on site = at locations + spares. At locations: the order's quantity once it is ticked on site (or what was recorded as supplied). A location with two types counts its numbers against its biggest line. Cancelled orders are not counted.

Inventory on site now, Toilets & amenities: 262 ordered, 79 on site, 51 carrying a Coates number and 1 Event Portables unit already recorded. Tap any number to see the locations behind it.

- **Stock by type and by trade:** ordered, at locations, Coates-numbered, sub-hired by company, spares, and still to come.
- **Spares:** units on site that aren't at a location. Each spare can be sent to a location, or taken off when it leaves site.
- **Swap:** change a Coates unit for a sub-hired one (or the other way round) in one step. What comes out goes back to spares.
- **Walk-around:** type the sticker number, press Enter, and it moves to the next location that still needs a number. A duplicate is refused and the page names where the number already is.
- **What turned up:** count each item against the order. Short and extra are flagged everywhere they matter.
- **Cancel an order:** it comes off every count, list and sheet, keeps the reason, and can be put back with one press.

The build, told like race day. Day and night.

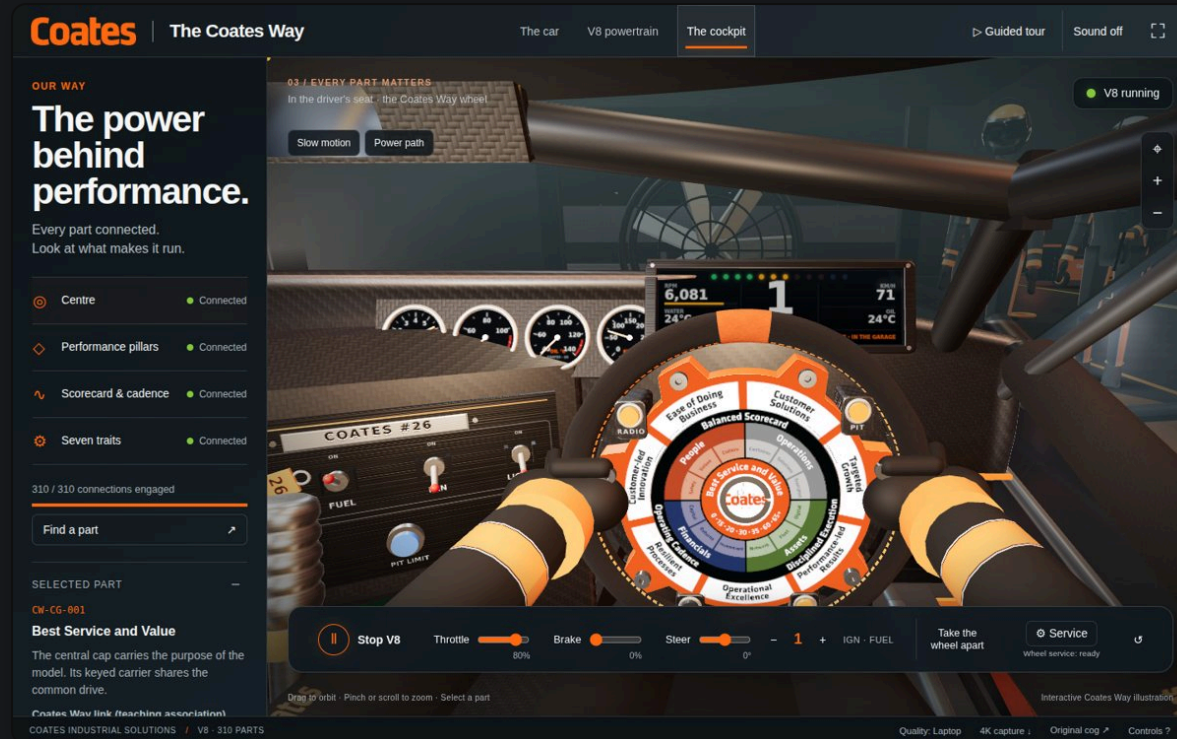

The circuit in 3D, day and night: the Coates #26 car, a Coates VMS trailer under tow at night, and fireworks that spell COATES GC500 2026.

- **Ten scenes, one button:** Start showcase on "Where we are". It runs hands-free or one scene at a time.
- **A real circuit:** built from the event key plan and OpenStreetMap buildings, with pit lane, kerbs and grandstands.
- **The figures are live:** every number in the scenes is read from the record as it stands on the day.
- **Broadcast:** a 35-part live race call voiced like Supercars commentary, with the crowd and a V8 underneath. It's worth turning the sound up.
- **Designed V8 sound,** with car-follow, drone and auto cameras, and a choice of vehicle: car, forklift, boom lift, scissor lift or tractor.

The backdrop is decoration and is labelled as such. Every figure on it comes from the record.

The power behind performance

The Coates Way, built as a race car. Best Service & Value is the centre cog, and the performance pillars, scorecard and behaviours are the parts that drive it. Every part is connected, so you can see what makes it run.

- **310 parts**, each named for a part of the Coates Way. Tap one to see what it does.
- **From the driver's seat**: the steering wheel runs everything. There's Start V8, throttle and brake, and 26 controls that click and move.
- **Coates FM** on the radio button, with a radio-host segment.
- **Explode the powertrain**, cut it away, or follow the power path from the centre cog out to the wheels.
- A guided tour, a dyno run and exhaust flame, in a working garage with a gantry crane, a hoist and tyre machines.

Why the business can trust it

- **One source of truth:** every tab reads the same live record, so the numbers match everywhere.
- **Honest by design:** "not recorded", "assumed" and "differs" are shown as different things, and nothing is estimated and passed off as fact.
- **Accountable:** every change carries who made it and when.
- **Safe to share:** the view link is read-only. Only the site team can edit.
- **Works where we work:** phone, tablet or desktop. It prints to A4 and emails PDFs.
- **Tested before it goes live:** every change is checked on desktop and phone against the live data before it's released.

WHERE IT COULD GO NEXT (FOR DISCUSSION)

- Carry it through demob to 13 Nov, with every unit numbered off site.
- Get rates on the 43 unrated contract lines, and sort out the servicing charge with the branch.
- Use the same approach on other events and shutdowns: live deliveries, labour and costs, on a map.

HAVE A LOOK (VIEW ONLY)

gc500-production.up.railway.app/v/Coates-GC500-2026

Open Map explorer, then press Start showcase on "Where we are", with the sound on.

Thanks to the crew, the drivers and our partners who keep the record right on the ground. The tool is only as good as the people using it, and they've been brilliant.
