Available on site - not in use (9 items): the maintenance window

If it's not in use, it comes back to the tool store. This list is the true-utilisation picture of the site plant fleet, and it is the Coates mechanic's preventative maintenance worklist - service gear while it sits idle, so it never fails in a contractor's hands (Life Saving Rule 5 - Tools and Equipment). Charging for these items has not started; as each one moves, the double-scan puts it on hire to its user, and on return to Site Plant Equipment (Coates).

Site infrastructure - barriers, chutes & hoppers (176 items)

Barriers, crowd control, rubbish chutes, hoppers and brackets stay on site for the duration of the shutdown by design - they are not idle plant, not a saving opportunity and not an issue. Listed for the record:

Life Saving Rules (SEQ-GL-009): Rule 5 - Tools and Equipment: damaged or defective plant is tagged out and removed from service, never reissued. Rule 6 - Critical Risk Non-Negotiables: mobile plant work follows the non-negotiable controls for that Critical Risk.

Honest limits: Idle plant is identified strictly by the site convention: on hire to hirer "Site Plant Equipment", company Coates - nothing else is counted as available-and-charged. Rates are contracted base rates (plant register rate used only where no contracted rate exists); items with no rate show a dash and are excluded from saving totals - never estimated, never \$0. Charged-while-idle is inclusive of the return day. Categories come from the K2 Plant Equipment register. All data reflects SiteIQ as at the data-as-at stamp above - this report is a point-in-time snapshot.

All returns go through the Coates tool store, handed to the stores team and double-scanned. Nothing is returned unless it is scanned.
