KEY • **COUNT DAILY** stock takes are done daily - no exceptions • **TWO SCANS TWO LOOKS** scanned and sighted, out and back • **2-DAY STANDARD** gas monitors, radios, radio batteries, Milwaukee tools and batteries every 2 days

THIS ONE IS YOURS. The client sees a compliance report that says the store is under control - here is the work that **MAKES** it true. **5,054 items** have been sighted in the last 30 days, **1,714 in the last 7**, and right now **86% of the 4,613 in-store items are inside their own tier cycle**. The wheel doesn't turn itself - it's turned by the people on this page.

The people turning the wheel

Every sighting in the register carries a name. This is who made the **latest** sighting of each item in the last 30 days - stocktake scans separated from movement scans, because walking a bay with a scanner is the work that finds idle gear.

WHO (RANKED BY ITEMS, LAST 30D)	ITEMS, LAST 7D	ITEMS, LAST 30D	OF WHICH STOCKTAKE SCANS	SHARE OF 30D	MOST RECENT SCAN
Thomas Maher	1,230	2,006	1,498	40%	03 Sep 12:59
Cody Mitchell	0	1,849	1,473	37%	20 Aug 16:30
Matt Bedford	479	1,194	742	24%	03 Sep 15:20

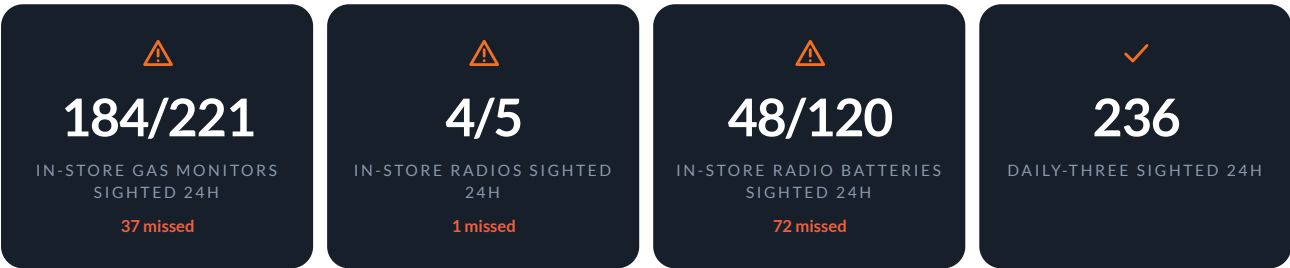

The export keeps one sighting per item - the latest - so these are items whose most recent scan carries this name, not every scan the person made. Share is of all items sighted in the last 30 days. Movement scans (issues and returns) also reset an item's clock - both count, both are the wheel turning.

Items by day of latest sighting - last 14 days, stocktake scans highlighted

The daily three - counted every single day

Three groups are on a DAILY count, not the weekly wheel: **gas monitors, radios and radio batteries**. Gas monitors keep people alive, radios keep the site talking, and batteries are what walks. Below is the last 24 hours for the units **in store** (on-hire units are out with their hirers) and exactly what was missed. Chargers and probes are not monitors and are not counted here.

Where to point the trolley - due items by bay

Clear a bay at a time - it is faster, it is auditable, and the register RAG turns green a whole shelf at a stretch. Bays ranked by due count; **oldest** is the longest-unsighted item in the bay.

STORAGE BAY (RANKED BY DUE ITEMS)	ITEMS	DUE NOW	SIGHTED 30D	OLDEST
F-B02	146	112	23%	31d

The shelf residue - the last few over 30 days

The in-store tail is short: **466 items** over 30 days, oldest **206 days**. Clear these and the shelf RAG goes green wall to wall. Also on the list: **3 stocktake lines** whose barcode is not on the live register (SD0026/002, AMP088/025, AMP088/026) - check the barcode and the register, not the shelf.

Long-hire gear - verify on next touch

1,043 on-hire items have had no verification scan in 180+ days, holding **\$1,527,370**. Not lost - on long hire - but every return, swap or shutdown check on these is a chance to scan one and retire the risk. The oldest dozen:

Also flagged: **3 possible missed returns** - sighted in a store bay after their on-hire date while still showing ON HIRE. Resolve those first so hirers aren't held for gear that is home; worklist section 0 lists them.

How we run the count

THE WHEEL BEATS THE BLITZ

Twenty minutes of bay-walking a day beats a two-day blitz a quarter. Movement resets clocks; the cadence hunts what sits still.

SCAN IT WHERE IT LIVES

Count an item in its home bay. If it is somewhere else, that is a finding - move it home or fix the register there and then.

THE DAILY THREE ARE SAFETY, NOT STOCK

A gas monitor missing from the shelf is a bump-test conversation, not a counting error. Same day, every day.

SAY WHAT YOU CAN'T FIND

An honest MISSING beats a quiet skip. Flag it, log it, and the search starts today instead of at contract end.
