THE POSITION AT 18:30, 02 SEP 2026. 878 Dräger X-am 5000 monitors on the Ampol register: **335 on the shelf**, **115 out to crew (77 overdue)**, 318 in custody and **110 in the Dräger repair queue**. Counted from the SiteIQ exports - nothing estimated.

Ampol Gas Monitor Operations

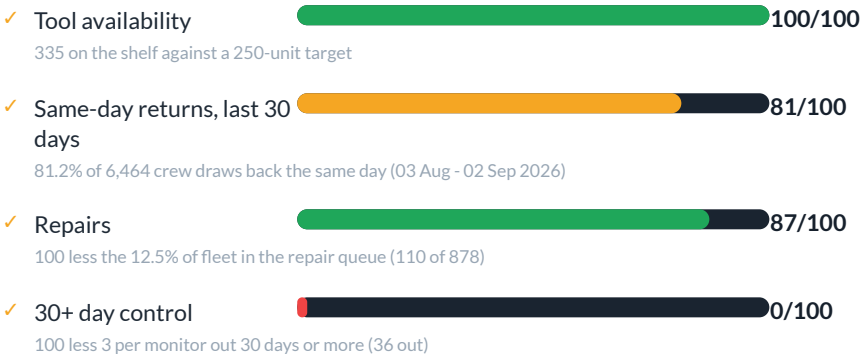

AS AT 02 SEP 2026 18:30

The position in detail

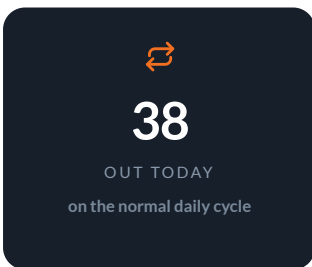

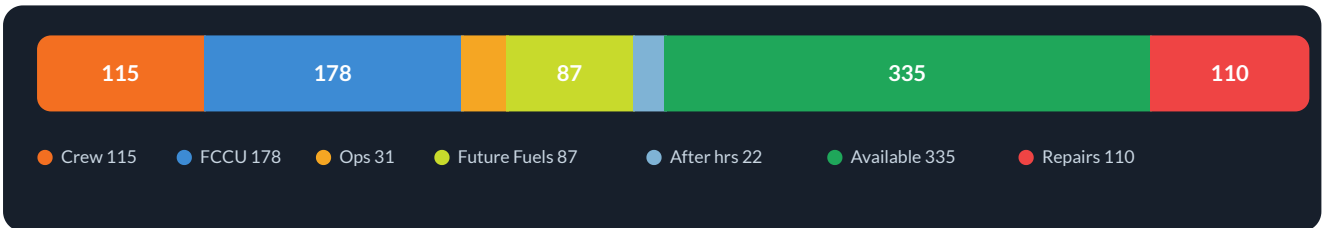

THE POSITION AT 18:30, 02 SEP 2026. 878 Dräger X-am 5000 monitors are on the Ampol register: 335 on the shelf, 115 out to crew (38 today, 77 overdue from earlier days), 318 in custody (FCCU, Operations, Future Fuels, after-hours) and 110 in the Dräger repair queue. Counted from the SiteIQ exports on the data page - nothing is estimated.

Health score = plain average of the four scores:
 $(100 + 81 + 87 + 0) \div 4 = 67$

The fleet at a glance - where every monitor is at 18:30

Health is green from 85, amber from 70, red below. Every score prints its own arithmetic; the four inputs are the shelf count against the 250-unit target, the 30-day same-day rate, the share of the fleet in the repair queue, and the units out 30 days or more. Custody holdings (FCCU 178, Operations 31, Future Fuels 87, after-hours 22) sit outside the crew count and are listed with their ages on the overdue page.

Ampol Gas Monitor Operations

AS AT 02 SEP 2026 18:30

Since the last pull - what moved

PULL AGAINST PULL. No earlier register pull is saved in Data\previous yet - movement pull against pull starts with the next pull (button 28 parks the old export automatically). From then on this page names every monitor that came back, went out, changed hands or crossed 30 days between the two pulls, barcode by barcode. In the 24 hours before the pull, **235 fleet monitors were drawn** and **266 came back** - 268 distinct monitors across 13 companies, counted from the transaction log. Nothing on this page is estimated.

The 24 hours before the pull - 01 Sep 2026 18:30 to 02 Sep 2026 18:30; by company, A to Z; 13 companies

Counted from every TRANSACTIONS row whose barcode is on the gas monitor register - crew draws and the custody and workflow lines alike: traffic across the counter, not the crew-only same-day measure. Net out = draws less returns.

Ampol Gas Monitor Operations

AS AT 02 SEP 2026 18:30

Where these numbers come from

Two SiteIQ exports, pulled together on **02 Sep 2026**, are the only inputs to this report. The table shows how much each window holds, so any figure on the pages that follow can be traced back to the rows it was counted from.

WINDOW	DATES	CREW DRAWS	BACK SAME DAY	NOT SAME DAY	PEOPLE	COMPANIES
Year to date	01 Jan - 02 Sep 2026	65,152	52,560 80.7%	12,592 19.3%	847	55
Last 3 months	01 Jun - 02 Sep 2026	25,356	21,011 82.9%	4,345 17.1%	657	48
Last 30 days	03 Aug - 02 Sep 2026	6,464	5,250 81.2%	1,214 18.8%	258	31
Yesterday	Tue 01 Sep 2026	280	244 87.1%	36 12.9%	47	18

Crew draws exclude the custody and workflow accounts (Dräger service statuses, FCCU, Operations, Future Fuels, After Hours) - 2,697 of the 67,849 gas monitor rows in the log this year. Each window is inclusive of its dates; the log closes at 05:59 on the report day, so "today" is not a window.

RENTAL_STOCK - THE REGISTER

What SiteIQ holds as **On Hire** (and to whom) and **Available for Hire** at the moment the export is pulled - here **02 Sep 2026 18:30**. It is where the position, the overdue list and the custody holdings come from.

TRANSACTIONS - THE MOVEMENT LOG

Every scan out and every scan in since **01 Jan 2026 06:00**, one row per monitor per draw, with a transaction ID and the time to the second. The store scans twice on the way out and twice on the way back, so a row only exists when a monitor physically crossed the counter. Every rate, trend and league comes from these rows.

WHAT A DRAW IS

One monitor, out to one named person, once. A person who takes three monitors at 05:00 is three draws. That is why the yearly count is large - the site draws hundreds a day - and why the behaviour measure is the **percentage** back the same day, not the count.

NOT RETURNED SAME DAY

A draw not scanned back on the calendar day it went out. A draw at or after 15:00 counts as same day if it is back by 08:00 next morning. A draw still open counts as not returned. The same rule is applied to every person and every company.

COUNTED, NEVER TYPED

Nothing on these pages is keyed in, adjusted or read from a summary cell. The two exports are read exactly as pulled and every figure is counted from their rows, so anyone with the same two files can re-derive any number here. The Excel workbook is not used.

BARCODES AND SERIALS

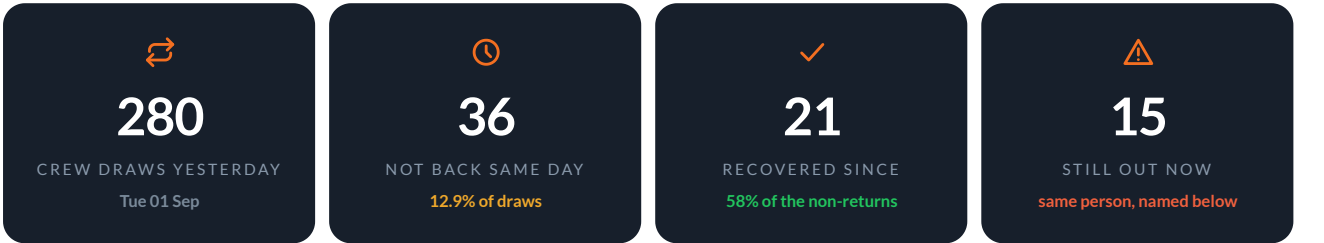

SiteIQ identifies a monitor by its **barcode**; the Dräger serial rides alongside for the calibration paperwork. **821 of the 878** monitors on the register carry a serial on the list; 57 do not - 54 of them in the AMP088 range and show a dash until the list is completed.

Ampol Gas Monitor Operations

AS AT 02 SEP 2026 18:30

Yesterday - did they come back?

On Tuesday 01 Sep, 280 monitors went out to crew. **36 were not back by the end of the day** (87.1% came back same day).
21 of those have come back since; **15 are still out** as at 18:30 and are named below - that is the prestart chase list.

COMPANY	NOT BACK	RECOVERED	STILL OUT	WHO STILL HAS THEM (UNITS)
Ampol	4	0	4	Anoop George (2), Peter Winter (1), Frank Farnoosh (1)
IPS	4	0	4	Dudit Istionto (4)
Contract Resources	13	10	3	Marcus Waratini (2), Leonard Atterwell (1)
Wood	5	3	2	David McGurk (2)
Enermech	4	2	2	Mitchell Barrington (1), Tyler Hausfeld (1)
ARL	2	2	0	all back - Syam Ravi
HIS	2	2	0	all back - Simon Phillips
Enprocon	1	1	0	all back - Travis Logan
NDE Solutions	1	1	0	all back - Arash Rostami

Cycle check: **36 = 21 recovered + 15 still out**. The register (RENTAL_STOCK) shows **15** monitors on hire to a person since yesterday - the two exports agree. Gas monitors come back **daily** for bump testing, charging and inspection.

ALERTS & ACTIONS

- 15 monitors from yesterday still out**
Named above by person. A monitor out overnight has missed its bump test - a safety conversation first, a hire conversation second.
- 36 monitors overdue 30 days or more**
\$72,000 exposure at \$2,000 per unit. A recovery conversation, not a debt notice - every unit is named in Appendix A.
- 8 monitors overdue 8-29 days**
The follow-up window - these become 30+ if nobody rings.

Ampol Gas Monitor Operations

Who is not bringing them back - last 30 days

Between 03 Aug - 02 Sep 2026, 258 people drew a monitor. 141 kept at least one past the day it went out, and 49 did so in 3 or more separate weeks - that is a habit, not a bad day. Ranked by non-returns in the last 30 days; the 3-month and year-to-date columns show whether the pattern is new or long-standing.

WHO	DRAWS 30D	NOT SAME DAY 30D	SAME-DAY % 30D	LAST 3 MONTHS	YEAR TO DATE	STILL OUT NOW

Not returned same day, last 30 days - by company, top 8

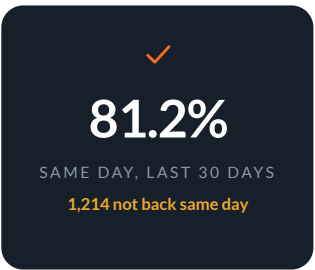

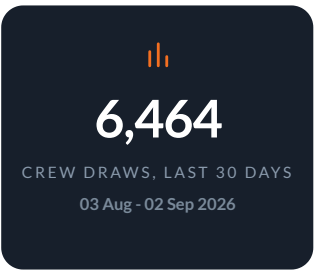

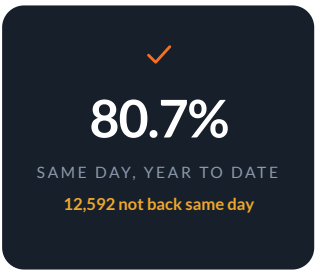

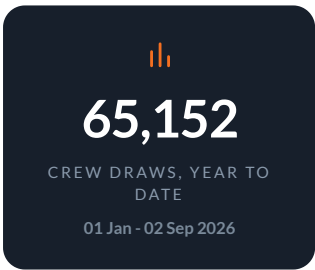

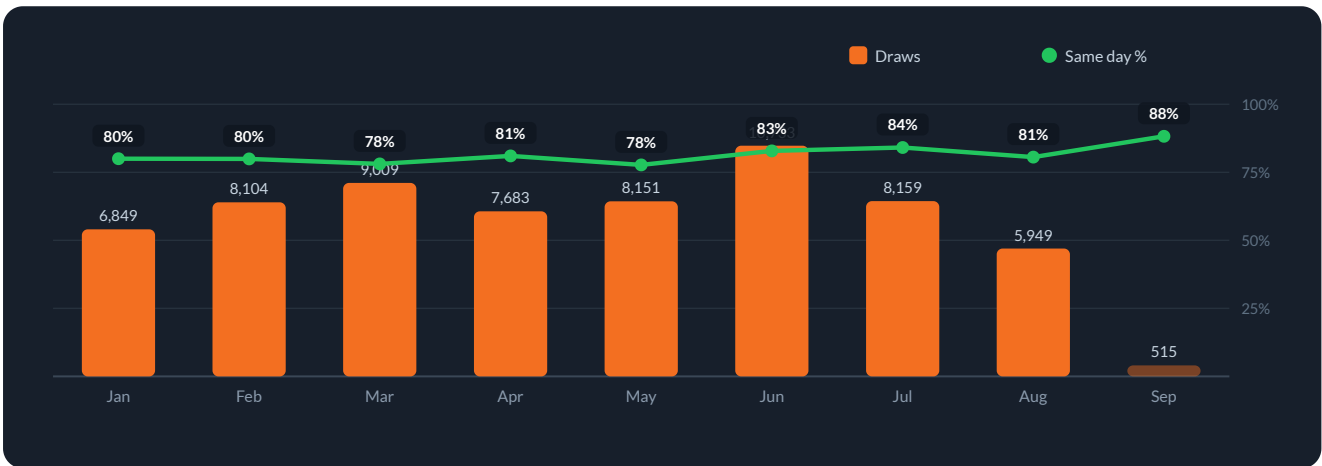

Ampol Gas Monitor Operations

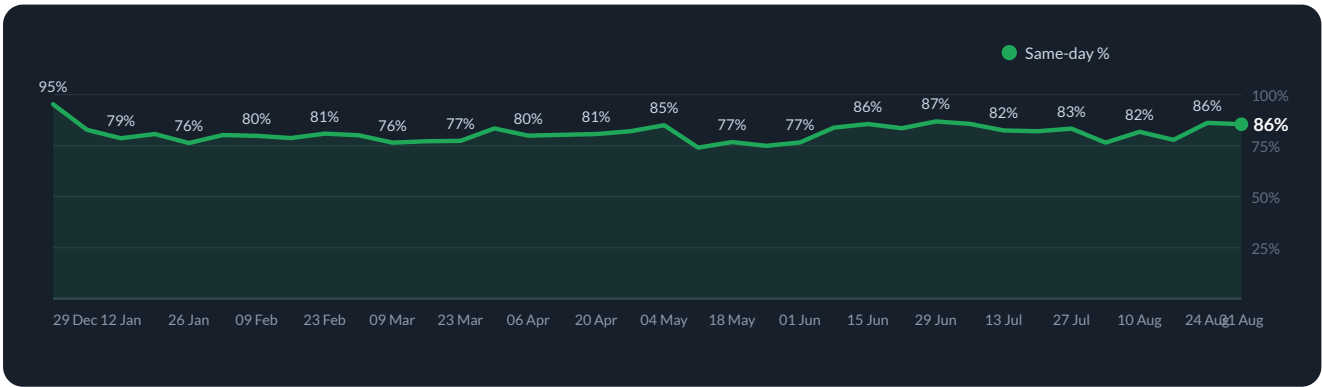

AS AT 02 SEP 2026 18:30

The year so far - volume and behaviour by month

Since 01 Jan, crews have drawn a monitor 65,152 times - about 383 a working day - and 80.7% came back the same day. The last 30 days ran at 81.2% on 6,464 draws. The bars are monthly draws; the line is the share back the same day - the last bar is a part month. The year-to-date total is large because the site draws hundreds of monitors a day - the behaviour measure is the percentage.

Same-day return rate by week - every week of the year (current week is partial)

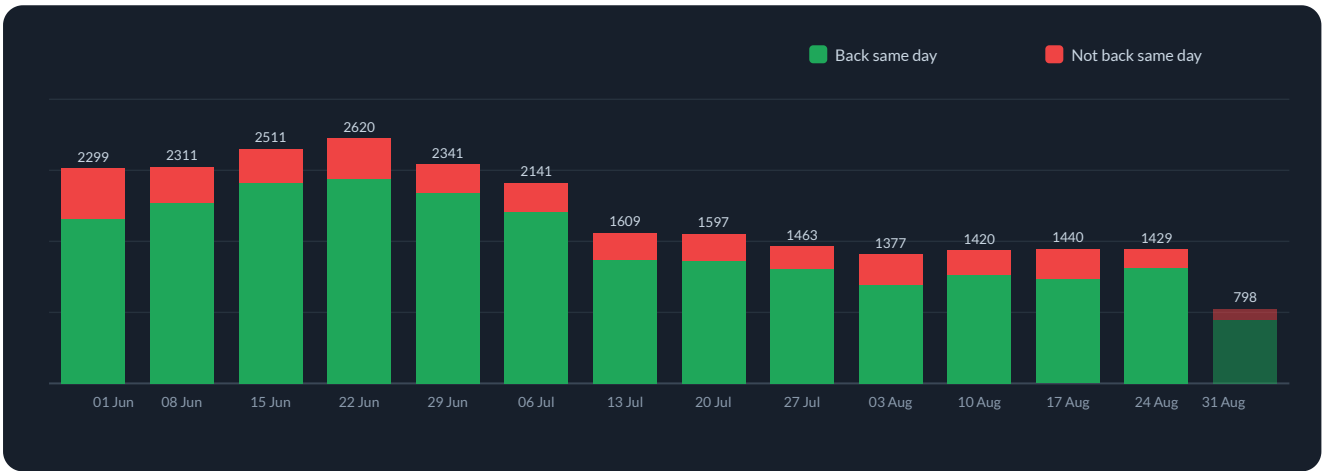

Each point is same-day returns ÷ crew draws for the week starting on the date shown.

Ampol Gas Monitor Operations

AS AT 02 SEP 2026 18:30

The last 3 months - week by week

25,356 crew draws between 01 Jun - 02 Sep 2026, and 82.9% came back the same day - 4,345 did not. 657 people drew a monitor in the quarter and 392 kept at least one past its day. The window is the 13 full weeks before this one plus this week so far, so the bars add up to the total. Each bar is a week starting on the Monday shown: green is back the same day, red is not - the last bar is this week so far. The worst week for non-returns began 01 Jun (538 of 2,299); the best began 29 Jun (86.9% same day).

Ampol Gas Monitor Operations

AS AT 02 SEP 2026 18:30

The daily rhythm - when monitors move (last 30 days)

76% of draws happen before 06:00; the median monitor goes out at 05:11 and comes back at 15:26. The record hour: 170 draws between 05:00 and 06:00 on Mon 10 Aug - one every 21 seconds. Between the morning surge and the afternoon wave the shelf carries the whole site - that is the daily squeeze in one picture.

Issues and returns by hour of day - 03 Aug - 02 Sep 2026

Net monitors drawn from the store through the day - average and worst of the last 10 working days

237
AVG NET DRAW BY MID-MORNING
issues less returns, same day

275
WORST RECENT DAY
same measure

05:11
MEDIAN ISSUE TIME
the morning surge

15:26
MEDIAN RETURN TIME
the afternoon wave

The curve counts every same-day issue minus every same-day return, half-hour by half-hour, custody movements included. It is why the 250-unit availability target exists: the shelf must survive from the surge to the wave.

Ampol Gas Monitor Operations

AS AT 02 SEP 2026 18:30

The shift rhythm - draws and returns by weekday and hour, year to date

Every crew draw since 01 Jan 2026 laid on a week: **4,440 draws** in the busiest cell (Thu 05:00-06:00), returns peaking on Tue 15:00-16:00 with **4,227**. Weekdays carry **63,808** draws against **1,344** on weekends, and **29%** of all draws happen between 19:00 and 05:00 - the after-hours window where the same-day rule does its work.

Draws - darker is quieter, orange is busier; the count is printed in every cell

	00	02	04	06	08	10	12	14	16	18	20	22

Counted from every crew transaction in the TRANSACTIONS export (01 Jan - 02 Sep 2026), custody accounts excluded; a cell is the number of draws (or returns) whose scan fell in that weekday and hour. A dark cell is a real zero. Read the two grids together: the gap between the draw peak and the return peak is the shift, and the after-hours cells are where monitors go out after 15:00 and come back before 08:00.

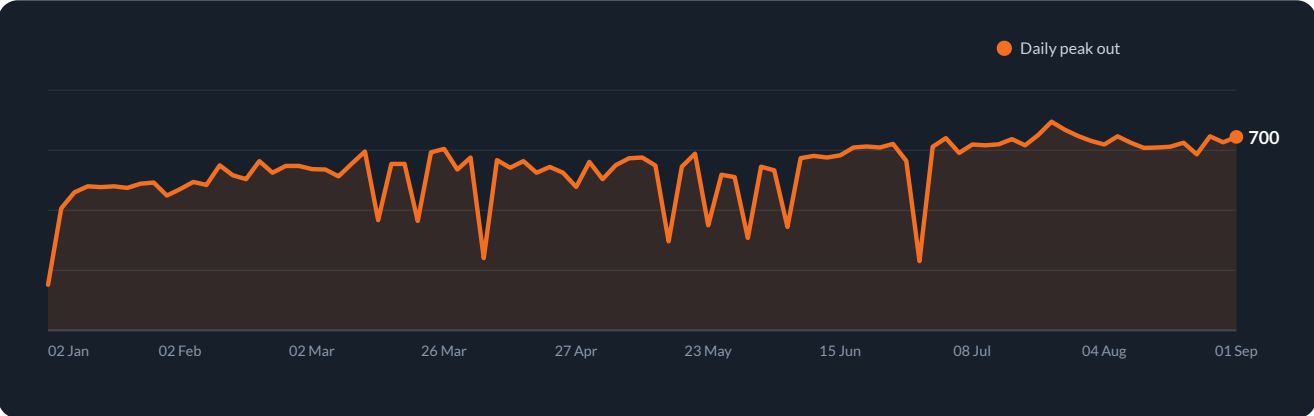

Ampol Gas Monitor Operations

AS AT 02 SEP 2026 18:30

Demand - monitors out at once, year to date

The record is **755 monitors out at once** at 10:33 on Thu 23 Jul - against **878 owned** and **768 usable** once the 110 in repair are set aside. In the last 30 days the peak was **726** on Wed 05 Aug. Every unit in custody or in the workshop is a unit the shelf cannot lend.

How long monitors stay out - every completed crew draw, year to date

Concurrency counts every open transaction in the export window, custody included. Items issued before the window opened sit outside it, so the register's on-hire figure runs higher; the register is the authority for right-now counts. The longest completed hold on record: **136 days** by **Eamon Rees** (Wood).

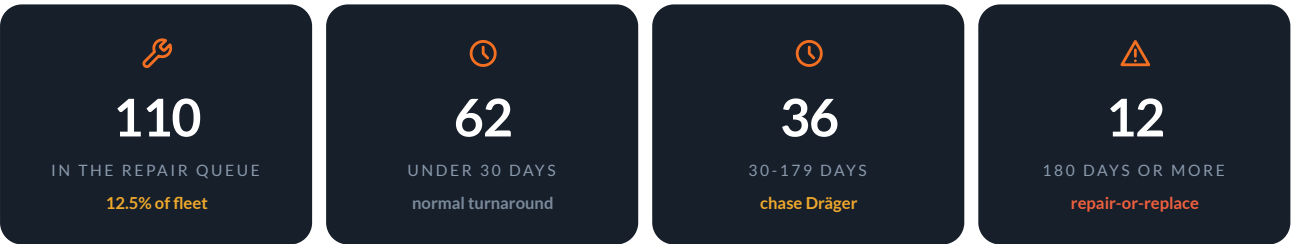

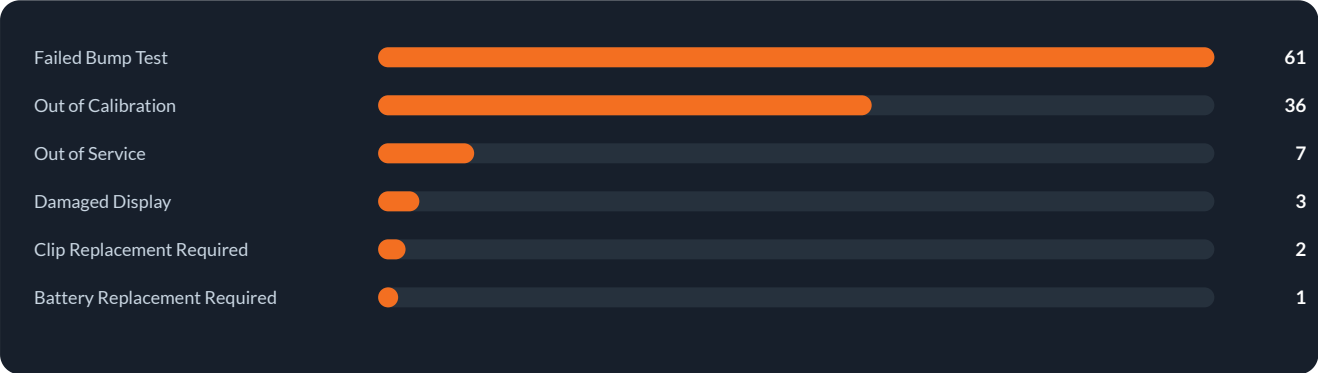

Ampol Gas Monitor Operations

AS AT 02 SEP 2026 18:30

Out of service - the Dräger repair queue

110 monitors are in the repair queue - 12.5% of the 878-unit fleet a crew cannot take. Largest category **Failed Bump Test**. 12 unit(s) have been in the queue 180 days or more - the oldest at 575 days. That is not a repair queue, that is dead fleet: a repair-or-replace call.

Repairs by status

Longest in the queue - oldest first

ITEM	ASSET / SERIAL	IN STATUS	REPAIR STATUS
Dräger X-am 5000 - Maintenance-ARSM-0808	AMPMAINGAS001/144 ARSM-0808	575d 04 Feb 2025	Out of Service
AMPOL DRAGER X-AM 5000 GAS MONITOR	CTX011/533 ARHD-0561	567d 12 Feb 2025	Out of Service
AMPOL DRAGER X-AM 5000 GAS MONITOR	CTX011/198 ARLK-0567	566d 13 Feb 2025	Out of Service
AMPOL DRAGER X-AM 5000 GAS MONITOR	CTX011/604 ARHD-0621	239d 06 Jan 2026	Out of Calibration
AMPOL DRAGER X-AM 5000 GAS MONITOR	CTX011/525 ARHD-0786	238d 07 Jan 2026	Failed Bump Test

Days in status are counted from the on-hire scan onto the Dräger custody line. A monitor that fails bump goes onto the Failed Bump Test line the same day, so this is a fair measure of turnaround.

Appendix A - overdue monitors, oldest first

Every monitor on hire to a named person with an on-hire date before 02 Sep 2026: 77 units. Gear issued today (38 units) is on its normal cycle and is not listed. Red at 30 days or more, amber at 8-29. Replacement charge \$2,000 per unit.

Replacement charge exposure - 36 units at 30 days or more

\$72,000

If nothing on this list came back at all the exposure would be \$154,000 across 77 units. Serial numbers come from the Gas_Monitor_Serial_Numbers list; a dash means the list does not carry that barcode.

Data and method - where every number comes from

SOURCE FILE	WHAT IT GIVES THE REPORT	PULLED	COVERS
RENTAL_STOCK.xlsx	Where every monitor is right now - status, who has it, on-hire date	02 Sep 2026 18:30	the live register at the pull
TRANSACTIONS.xlsx	Every issue and return scan with a timestamp	02 Sep 2026 18:30	issues 01 Jan 06:00 to 02 Sep 2026 05:59; returns to the pull
Gas_Monitor_Serial_Numbers.xlsx	Serial number for each barcode - display only	-	not a source of counts
Ampol Gas Monitor Report.xlsm	Not used - its summary tab is what the old report quoted	-	not a source of numbers

The rules

Gas monitor	Description contains "X-am" or "gas monitor". Chargers and probes are not monitors.
Crew draw	A transaction to a named person. Dräger service statuses, FCCU and Operations custody, Future Fuels and the After Hours account are workflows, not people - reported on their own lines, never as a person.
Same day	Scanned back on the calendar day it went out. A draw at or after 15:00 counts as same day if back by 08:00 next morning. Draws still open are not same day.
Overdue	On hire to a person with an on-hire date before the report date. Gear issued today is "out today", not overdue. Days are counted from the on-hire scan.
Windows	Year to date = the transactions export (01 Jan - 02 Sep 2026). Last 3 months = the 13 full weeks before this one plus this week so far (01 Jun - 02 Sep 2026). Last 30 days = 03 Aug - 02 Sep 2026. Yesterday = 01 Sep 2026, the last complete day. Repeat = a non-return in 3 or more separate weeks of the last 30 days.
Exposure	\$2,000 per monitor overdue 30 days or more - the replacement charge from the Ampol gas monitor workbook. Never estimated.
Health score	Plain average of availability, 30-day same-day rate, repairs and 30+ day control. Each formula is printed beside its score on the position page.

Reconciliation - the two exports checked against each other

Check 1	RENTAL_STOCK shows 543 monitors on hire; TRANSACTIONS holds 409 open transactions; 409 match by barcode.
Check 2	134 on-hire rows have no open transaction: 90 were issued before the transactions window opened (01 Jan 2026) and 44 after it closed (02 Sep 2026 05:59) - Future Fuels 87, After Hours Hire account 22, crew 13, repair 12.
Check 3	Yesterday's still-out count agrees between the two exports: 15.
Check 4	Serial list: 821 of the 878 monitors on the register carry a serial on it; 57 do not (54 of them in the AMP088 range). Barcode is the identity SiteIQ scans; the serial is display only. 1 serial(s) appear against two barcodes (ARHD-0595 = CTX011/583, AMP088/018) - usually a re-labelled unit whose old barcode was never retired from the list.
Check 5	50 barcodes moved this year but are no longer on the register (returned to Dräger, re-labelled or written off): their 2,609 draws are counted in the flow figures, and they are not in the position.

Trend page: appears once seven days are on record (1 today). Australian dates, metric units, 24-hour time. Anything the source does not carry is shown as a dash, never guessed.

Ampol Gas Monitor Operations

The tool store has your back

SCAN AND LOOK - EVERY TIME

Every monitor is scanned **and** sighted going out, and scanned and sighted coming back. If it moved, it is on the record. That is your protection as much as ours.

BUMP, CHARGE, INSPECT - DAILY

Gas monitors come back **every shift** for bump testing, charging and inspection. A monitor out overnight has not been bump tested - that is a safety follow-up, not a hire question.

OUT OF CALIBRATION IS OUT OF SERVICE

Anything out of calibration comes off the shelf. You will never be issued a monitor we would not carry ourselves.

NUMBERS YOU CAN CHALLENGE

Every score on the position page prints its own arithmetic and every figure is counted from the SiteIQ exports named on the data page. Nothing is weighted behind the scenes and nothing is estimated.

BREAKDOWNS - TELL US EVERYTHING

Something stops? Tell us **where it is, what is wrong, what it was doing**. We will get it swapped or fixed - no drama, no waiting.

RECONCILED BEFORE IT IS SENT

The register and the transaction log are checked against each other on every build. Any difference is printed on the data page, not quietly dropped.

THE COATES WAY

Australia's most trusted equipment partner - delivering Best Service & Value.

Care Deeply • Customer Focused • Be Our Best • One Team • Competitive Spirit

Every figure in this report is counted from the SiteIQ exports named on its data page. Nothing is estimated, weighted or typed in.

Meet the tool store team

The crew running your Ampol store - getting the right gear to the right people, keeping it tested and ready, and making sure everything that leaves the store is right. Something not on hand or not right? Tell us and we'll sort it.
