

## MY GEAR

### HOW IT WORKS

#### EVERY MORNING

Tool store — about 15 minutes

1. **Pull today's numbers** — run `28_PULL_SITEIQ_EXPORTS.bat` - it takes the SiteIQ exports out of Downloads and files them
2. **Build the page** — run `04_RUN_MY_GEAR.bat`
3. **Serve it** — run `31_START_GEAR_LOOKUP_HTTPS.bat` and **leave that window open** - close it and the QR codes stop working
4. **Check the address** — if it prints something other than the address at the foot of this sheet, run `32_UPDATE_POSTERS.bat` and reprint the posters

#### GETTING YOUR LIST

Anyone on site — about 30 seconds

1. **Join the store Wi-Fi** — scan QR 1 on the poster, tap join
2. **Open My Gear** — scan QR 2, or type the address at the foot of this sheet
3. **Put your ID in** — type your hire ID, or tap **SCAN** and hold your card up to the camera
4. **Your gear appears** — everything in your name, oldest first, with what each item needs
5. **Take it with you** — print the A4 sheet, or just keep it open on your phone

#### UPDATED ONCE A DAY

The list is built **about 7:00 AM** from that morning's SiteIQ pull. Anything taken or handed back after that shows up **tomorrow**. It is a record of what is in your name, not a live feed — if it looks wrong, check the time before you chase it.

#### IF SOMETHING LOOKS WRONG

---

The store server isn't running. Ask the tool store to start it.

---

The scan button only appears on a secure (https) connection. Type your ID in instead - it works the same.

---

The list is built once a day at 7:00 AM. It'll be right tomorrow.

---

Same reason - anything after 7:00 AM shows tomorrow.

---

Wrong ID number. A number that isn't yours shows an empty list, never someone else's gear.

---
